

Don't Ask Macro  
By Robert King

The included DA.WPM macro allows you to copy, move and delete files without confirmation.

#### Installation

Copy the DA.WPM file to your macro directory. You may rename the file if you wish.

#### Usage

Launch WordPerfect, press (Alt-F10), type "da" (or whatever you've named the macro) and press (Enter). A special directory list will display that mimics all the functionality of WordPerfect's native List Files (i.e., F5), but with additional features and without asking for confirmation of the copy/move/delete file functions.
