A Document Assembly Macro Using Subdocuments

The included DOC.WPM macro uses WordPerfect's subdocument feature to assemble a master document. The macro must be in the directory you designated for macros in Setup (Shift-F1) or the same directory as WP.EXE. If no directory is designated in Setup for macros, the macro must be in the current default directory or the same directory as WP.EXE.

Start DOC.WPM by pressing (Alt-F10), typing "doc" and pressing (Enter) (or rename DOC.WPM as an Alt-letter macro, if you like).

You are prompted for the first subdocument name. Type the name and press (Enter). You are asked if there is another subdocument. Type "y" or "Y" if there are more or "n" or "N" if not. When you enter "n" or "N", you are asked if you want to expand the document. "Y" or "y" expands the document and "N" or "n" terminates the macro.
