WPDOS 6.2 Function Key Template Macro
WPUniverse.com
By Chris Scott

New! Improved! XT and Enhanced function key templates that run command!

• FKEYS.WPM is a macro form of the keyboard template in 6.2, for function keys at top. (6.2 does not have a native template for XT / function keys on left.)

• FKEYSX.WPM is a macro form of the 5.1 XT template, without coloring. I added F11 and F12 since I redefined Scroll Lock=F11 and Sys Req via utility KeyTweak.

The macros display the template and run whatever key or combo is pressed, not just function keys.

There are no safeguards so they run only function keys or only from main screen

Edit the template for where your Help key is assigned. You can edit to clarify stuff like cancel and undelete. Put in reminders like Home-Exit for exit all.

Note: If one edits the template and uses it to save itself, it won't work.

Making the template with 5.1 coloring in all screen modes and mousified may be possible using different a menu display technique.

Since pressing Help twice yields 6.2's template, you could redefine Help in the keyboard file (wpk) so that a quick double-strike runs FKEYS and a slow strike yields the Help template. I access the templates via a menu.

The enhanced and XT templates combo sequence is different, as seen in 5.1's help templates. I find it bothersome.

XT	Enhanced
Ctrl	Ctrl
Shift	Alt
Alt	Shift
Alone	Alone
