Shade Alternate Table Rows
WordPerfect Magazine
By Jennifer Carling

To shade every other table row in WP 6.x, use the included SHADE.WPM macro.

To play the macro, place your cursor in the table, press Play Macro (Alt+F10), then type "shade" and press (Enter). As the macro prompts you, place your cursor in the first row you want to shade and press (Enter). The macro then shades every other row of the table. To view your work, press Print/Fax (Shift+F7) and (7) Print Preview. Press Exit (F7) when you're done.

Note: If you add or delete rows, simply run SHADE.WPM again to reshade the rows.
