*Not available on PC version
†Formatting option not supported

(48 PTI SOFT-SECTORED OR 8 INCH*)

micro/VERSAL™ is easy to use – menu driven, and requires only 64K and 2 floppy drives or 1 floppy and a hard disk; runs under both DOS and DOS2.

You also get utilities to help you transfer your files:

- **ANYCPM™** – define your own CP/M formats for machines not listed on our formats menu.
- **RECOVER** accidentally deleted files.
- **SED** – a disk sector editor lets you examine and modify any bite on any disk, even CP/M disks.
- Utilities to modify files to **MS-DOS** standards from other operating systems.

only micro/VERSAL™ gives you **EVERYTHING YOU NEED FOR ONE LOW PRICE:**

\$49.95

plus \$4.00 shipping & handling

Send check, money order, M/C or VISA numbers to:

Also from AST is our COED full screen editor, with macro commands, user Definable function keys, UNDELETE, Multiple files, built in calculator, on disk tutorial, and much more. COED is FAST, works with BASIC programs and has NO LIMIT on file size . . . Lose those EDLINE blues

NOT PROTECTED

Genie™

Software Magic from Advanced Software Technologies

Genie is a memory resident application. This means that once you load Genie it is always available for you to use. Just hit the magic keys and Genie will appear (Shift-Shift: No function keys lost.) You can have Genie perform various tasks, and when you finish Genie goes away and you are back where you started.

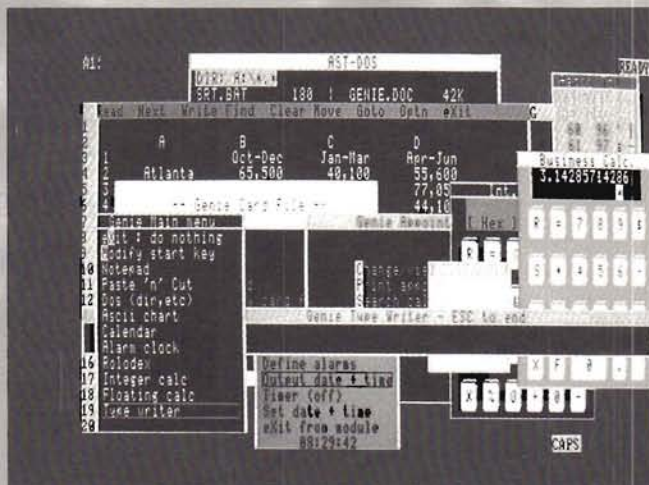

Here is what you get with Genie:

- **KEY MAPPER** - Redefine any key on the fly, store long commands in a single key, and save many maps on disk.
- **TrueDOS™** - Run any MS-DOS program inside the window. FORMAT, SORT, BACKUP, compile, all without leaving your application.
- **CALCULATORS** - you get two calculators, one regular floating point calculator, and programmer's calculator for base conversions and bit operations.
- **NOTE PAD** - you'll never have to hunt for paper and pen again. Simply call up Genie's Note Pad and jot down what you need. Or expand the buffer to 56K: Instant editor.
- **CUT AND PASTE** - Cut text from any place on the screen and output it later. Cut long commands off the screen and into your KEY MAPPER, move data from your spread sheet to your word processor: Instant integration.
- **CALENDAR** - schedule appointments for any year up to 9999 keep track of expenses, search and print the calendar.
- **ROLODEX** - a name address and telephone number list that you can search any time. No limit on the number of cards. You can even output an address directly to your word processor.
- **ALARM CLOCK** - Have your Genie remind you of appointments, set alarms to ring at any time on any day. A window appears with a reminder of what each of the 8 alarms is for.
- **ASCII Table** - programmers never have to leaf through big books to find the ASCII value of a character.
- **TYPEWRITER** - Knock out quick memos any time, even send ESCAPE codes to your printer. Cut a portion of a spread sheet and paste into the typewriter for quick printouts.
- **SCREEN SAVER** - Automatic phosphor protector for your tube. Genie will even let you blank the screen manually to discourage peepers.
- **COMMAND STACK** - Lets you access up to the last 2K worth of commands you typed.

Best of all with Genie you only have to load what you use. If you don't need to use an ASCII chart don't load it. Need extra alarms? then load two alarm clocks. Your own personal Genie.

And now Genie user's have the advantage of Genie accessories, which can be installed and accessed like any Genie function - any time:

- a **Scientific Calculator** more powerful than most real calculators. Has a full range of math, science and statistical function, and very high accuracy.
- a **Spelling Helper™** To help you find the correct spelling without leaving your word processor.
- a **Print Spuffer™** (spooler/buffer) to speed and manage all your printing.
- a development pack to let you write your own pop up programs, including many routines for windowing, and source code for our Rolodex. Writing pop ups is a snap. (Please call for details)

Shown here is Genie "popped up" on a Z-110 running Lotus 123. From the left are: The Genie main menu, the Genie rolodex style card file, the Genie notepad containing data cut from Lotus, the Genie DOS performing a directory command, the Genie alarm clock (at the bottom,) the Genie typewriter, Genie calendar, Genie Cut and paste, Genie Calculators, and the Genie ASCII table.

Only Genie Gives you so much for so little.

Welcome to the Heath/Zenith Users' Group!

It is our pleasure to present the following information to fellow members and the newcomers to the National Heath/Zenith Users' Group. The January Issue of REMark will provide you with compiled material especially designed to update your records with a cross-reference index to all previous articles found in REMark during 1985, a listing of companies that provide Heath/Zenith related hardware and software products, a listing of Local Heath/Zenith Users' Groups, related publications information, and a variety of small, but useful, tips for contacting knowledgeable individuals who are familiar with Heath/Zenith equipment.

For The New Member:

This Issue of REMark will be your first contact with the Heath/Zenith Users' Group. The material contained herein represents a good look at the number of people, clubs, and organizations supporting the Heath/Zenith Computer Product Line. Further, HUG has selected that information which you may find most helpful to get you familiar with our organization. This Issue, along with the Software Catalog, Software Catalog Update and following issues of REMark provided as a part of your membership, will help you explore the exciting and powerful world of micro-computing.

For The "Oldtimer":

The material contained in this Issue of REMark will help previous members stay current with new HUG policies, additional Local HUG Clubs, and the new support activities from companies that may be of particular interest. The HUG Software Catalog, HUG Software Catalog Updates, as well as the January Issue of REMark, are a permanent part of the HUG membership package provided to any user joining the HUG community.

General Heath/Zenith Users' Group Information

Membership Eligibility

A bona fide interest in Heath/Zenith computer related products is all that is necessary for membership eligibility. You need not be an owner of a Heath/Zenith product to join. Membership is open to any individual or company representative.

Bob Ellerton
HUG Manager

Margaret Bacon
HUG Secretary

As a member, you will receive:

- A subscription to REMark, the official Heath/Zenith magazine (12 Issues/Yr.)
- A HUG binder
- A personal identification card
- HUG Software Catalog and Updates
- Access to the Heath/Zenith Users' Group Software Library
- Access to the HUG Bulletin Board via MicroNET *
- Discounts on a variety of Heath/Zenith computer products

* **Note:** Requires CompuServe membership available from the Heath Users' Group.

These benefits are described in the following paragraphs.

HUG Membership Rates

The following rate schedule applies as of January, 1985 for membership:

Type of Membership	U.S. Domestic	APO/FPO & All Others
Initial	\$20.00	* \$35.00
Renewal	\$17.00	* \$30.00

* **Note:** Must be in U.S. funds

The initial membership package includes the HUG binder, the HUG Software Catalog, Software Catalog Update, a Heath Parts Order Form, and a copy of the January Issue of REMark.

Identification Card

When your membership is accepted, a computer generated ID card is issued. The ID card is sent to you separately via first class mail. This card identifies you as a member of the Heath/Zenith Users' Group. It contains a unique number which can be verified for membership. (**Allow several weeks for the processing and delivery of your personal ID card.**) For multiple year memberships or renewals, you will receive a new ID card each month for the number of years you have paid for.

Your HUG ID Card entitles you to discounts on a variety of Heath/Zenith computer products. Please review and retain the following information for your records.

HUG Discount Rules and Regulations:

1. You must be a member of the Heath/Zenith Users' Group for a period of 90 days before you can use your HUG ID to participate in the discount program. If you renew your membership in the Heath/Zenith Users' Group, you may use your ID card immediately to participate.
2. Your ID card can only be used at your local Heath/Zenith Computers & Electronics Center or through mail order purchases placed with Heath Company. **Telephone orders will not be accepted.**
3. Your discount applies to the first \$5,000 of products purchased per year. The \$5,000 ceiling on purchases is based on the current list price of the products you purchase at the date shown on the invoice.
4. You may purchase only one of any given product per year, (e.g. one "Z" or "H" 100 series computer per year).

Pat Swayne
HUG Software Engineer

Nancy Strunk
HUG Software Coordinator

Jim Buszkiewicz
HUG Software Developer

Lori Lerch
REMark Editorial and
Advertising Assistant

5. Your HUG ID card is not transferable. You will be required to show both your HUG ID and another suitable piece of identification to receive the benefits of the discount program.
6. You cannot make a purchase at the discounted rates without your HUG ID card.
7. Your HUG ID cannot be used to purchase individual parts or HUG software products under the discount program from the Heath/Zenith Computers & Electronics Centers or from Heath Company. **HUG products are considered parts.**
8. The ID card can be used for a 10% discount on Heathkit computer related items only.
9. The ID card can be used for a 20% discount on Zenith Data Systems (assembled) computer related items only.
10. Any item purchased which installs as a modification to the internal portions of the computer (i.e. boards, drives, ROMs, etc.) is considered a kit item.
11. Any item (unless purchased as a kit) which is an external addition to the computer as a system (e.g. complete wired drive enclosures, printers, etc.) is considered a wired item.
12. Heath or Zenith Data Systems software is considered a finished or assembled item and therefore, can be purchased at the 20% discount. Since HUG software is considered a part, it is not included in either program.
13. Multiple discounts do not apply. You can use either "special prices" or your HUG discount, whichever is greater. The HUG ID may not be used with any promotional certificates offered by Heath Company or the Heath/Zenith Computers & Electronics Center.
14. **Heathkit Mail Order Catalog purchases must be accompanied by your HUG ID card and a SELF-ADDRESSED STAMPED ENVELOPE for return of your ID once the order has been processed.**
15. If you lose your ID card, you can only receive a replacement by purchasing a new membership to HUG at the current renewal rate. You may, however, use this ID immediately if you have been a HUG member for more than 90 days.
16. To receive a replacement ID, send your request along with your **HUG ID number (found on your REMark mailing label) and renewal fee to:**

Attn:HUG Secretary/New ID Card
 Heath/Zenith Users' Group
 Hilltop Road
 St. Joseph, MI 49085

Publications

REMark, the official magazine for users of Heath/Zenith computer products, is sent to each member 12 times a year. The January Issue is designed as a cross-reference to the previous issues and contains valuable information that you may need. Individual back issues may be obtained during the current year. However, at the end of each year, all twelve issues become a single bound REMark Volume which may be purchased as a separate item. There are currently six REMark Volumes available.

A subscription to REMark is included with your membership. The magazine is sent via bulk mail, as are most other organization's publications. Bulk mailing means **YOUR REMark WILL NOT BE FORWARDED SHOULD YOU MOVE.** Therefore, please notify the HUG Secretary of your address change and the date which you wish the change to take effect.

We encourage each member to use REMark to communicate with other users. You can do this by submitting articles for publication. We strongly encourage any comments which you feel would benefit other users. We welcome your letters, hardware descriptions, software enhancements, applications programs, and other material you may wish to share.

Major Article Program

Major articles are defined as articles containing 2000 words or more. Authors contributing major articles that are printed in REMark will receive a "Certificate of Recognition and Appreciation" from the Heath/Zenith Users' Group and their choice of any single Heath/Zenith software product **FREE or ONE HUG BUCK.** Educational programs or packages are not included in the Major Article Program.

The Heath/Zenith Users' Group is proud to announce the addition of the HUG BUCK as an incentive for authors contributing major articles to REMark. You can receive the HUG BUCK instead of free Heath/Zenith software. This award is worth \$100.00 toward the purchase of **any** Heathkit or Zenith Data Systems product. HUG BUCKs can be collected to completely or partially purchase the product of your choice. Specifics regarding the use of the HUG BUCK accompanies the award itself.

Those individuals that contribute smaller articles will receive the "Certificate of Recognition and Appreciation" from the Heath/Zenith Users' Group. As you can see, we feel that any information you send us is important.

Certificates, software or HUG BUCKs are sent out after your article appears in REMark.

How to Submit Articles to REMark

What Subject?

Feel free to submit article manuscripts on any subject matter that you think will be of interest to the Heath/Zenith Users' Group community. Tutorial or How-To articles tend to be the most popular. Highly technical articles, although acceptable, do not have a broad readership base.

If you choose what might be considered a highly technical subject, try not to use terms which the average user would not be familiar with. If you should feel the need to use such terms, give a definition. Be kind to those who might not understand your application and explain your special programming tricks with a little extra detail. It's these "tricks" that help others to comprehend programming techniques and to be better programmers themselves.

If you feel that you have a unique program or hardware application, sit down and write about it. Do you have a special program for the bowling team, softball league, maybe a different business or farm program? Possibly you have interfaced your computer to some special machine to gather data for later evaluation. These are just some of the things other HUGgies are interested in reading about.

Following is only a sample list of possible subjects:

Software:

Application
Modification
New approaches
File handling
I/O handling
Enhancements
Reviews

Hardware:

Special applications
(Schools, Business, Handicap, etc.)
Enhancements
Interfacing
Problem solving

Review past issues of REMark. See what subjects have been covered. Try not to cover the same subject unless you have a better or totally different approach. Don't be a "me too" writer, open new doors.

How Big?

To qualify for the "Major Article Program," your manuscript must be 2,000 words or more (listings not included). Articles in excess of 5,000 words generally need to be broken into installments for separate publication.

Articles of less than 2,000 words and "Buggin' HUG" letters are acceptable. However, this type of submittal does not qualify for HUG reimbursement of a Heath/Zenith software product or HUG BUCK.

How About Photos?

If a photograph will help explain, include it. Clear, sharply focused, black and white photos reproduce best, but color photos can be used. Include a caption with each photo to help with the explanation. Any photographs become the property of REMark and cannot be returned.

What About Drawings?

If a drawing, like photographs, will help, include it. We request that you provide us with finished India Ink drawings suitable for reproduction. Should you feel you are not capable of supplying finished artwork, check with a local high school drafting class. Generally, these students are anxious to display their talent. REMark, in some cases, will provide artwork, but this will delay publication of your article.

Is Hardcopy Necessary?

Yes! We request that any submittal include a printout of all files. Also, we would like to know what you feel your article should look like in print. In some cases, we do not have the processor the author used to duplicate text provided on disk.

Is A Disk Copy Needed?

Yes! REMark uses the latest techniques for the preparation of copy. Submitting your manuscript on disk along with all pertinent files moves the information through our system faster. We can accept any **standard** Heath/Zenith disk format. Your text files should not have visible or hidden coding, since these codes can delay the production process.

Should you have questions about an article you would like to submit, please feel free to contact the REMark Manager. All materials received for publication in REMark become the property of the Heath/Zenith Users' Group.

Once you have completed your article, send it directly to:

The Heath/Zenith Users' Group
Attn: REMark Article
Hilltop Road
St. Joseph, MI 49085

How to Submit Programs To The Heath/Zenith Users' Group

After you have developed a program and before you submit it, check it thoroughly. Be reasonably sure that it is error free.

Three methods of submitting programs to the Heath/Zenith Users' Group are available for your selection based on your judgement of the finished program and its value to other members. Your program may be contributed under the following categories:

Public Domain Library — Free distribution to the membership via bulletin boards or other means available to HUG with the possibility of inclusion into the HUG Software Library.

HUG Software Library — For development by HUG as a finished software product to be offered for sale to other individuals as source for HUG income to further develop the users' group.

Royalty Software Library — Author supported, finished, reliable software with a signed contract paying the author for availability of the program to users of Heath/Zenith computer products.

Submit your program by completely filling out the submittal form included in this issue of REMark. Send your program on disk. Include with your submittal a complete listing of the contents on the disk and any additional documentation that you feel will be helpful for our records. Submit a sample "run" of your program from a hard copy terminal, when possible. If one is not available, hand copy as much as you feel necessary to give us an idea of how the program is supposed to perform. Be sure to sign and date the completed submittal form and check the category that you feel is appropriate for your program.

Once we receive your program, you will be notified. On the completion of the review, we will contact you with the status of your program. Remember, the person submitting the program is expected to handle any programming problems.

If your program is accepted and used by the Heath/Zenith Users' Group, you will be eligible for certain types of reward based on the category you have selected on the submittal form. **Please note, however, that no reward can be made until the product is released to the members of the user community through an announcement in the "New HUG Products" section of REMark.**

Rewards For Program Contributions:

Public Domain Software Library —

You will receive any HUG software package free once your program has been added to the public library. Your package will be made available through the HUG Bulletin Board system (616) 982-3956.

HUG Software Library —

One year extension of your HUG membership. One year membership if you are not already a member. A free copy of your program as released by HUG. Your choice of any single Heath/Zenith software product.

Royalty Software Library —

You are paid on a quarterly basis for the number of disks sold during a three month period. Checks are generally sent 30 days after the end of each quarter. Since you are paid for your program submittal, no other compensation applies.

Note: Multiple related programs on one disk is considered one submittal (e.g. GAME1, GAME2, GAME3, etc.). If your programs are released on one product, this is considered a single contribution to the Heath/Zenith Users' Group.

Notes On Software Submittals

HUG receives literally hundreds of programs each year for possible distribution to the user community. As you know, to review a software package requires learning the package. The review cycle is extremely time consuming. Therefore, we look for packages with the following attributes that are critical to the success of your program as a HUG Software Product:

We begin the review process as "beginners." In other words, your package must contain information that instructs the user through the set up and operation of the program from a very basic point of view. Remember to include information about your system that will enable the user (in this case, the reviewer) to duplicate the system requirements that made the software respond. Include operating system and version (e.g. CP/M 2.2.03), language and version (e.g. MBASIC 5.21), your machine type, and your memory requirements for the program.

Beyond set up and operation of the program itself, we look for thorough documentation as to what the program is going to do. If, for example, the program is a game; the user must know the rules, what is to be expected, what is the object of the game, and what input is required to make the game playable.

Next, we review the operation of the program. If the set-up and operational instructions are good, there should be no problem getting the program to perform as expected. In many cases, reviewers are stymied not because the program will not perform, but because the documentation for set-up and operation did not give sufficient detail to allow a thorough operational check.

A First-Time-Through-Section, although optional, is most advantageous for the reviewer and the end user. The First-Time-Through-Section should include the basics of setting up the program(s). It also should detail a mock run through your program with "dummy" data. This section should touch on most of the important options of your program. All option details should be explained in the documentation.

After we have made basic operational tests, we begin looking for undocumented "bugs" in the program itself. If a program defect is detected, the review process is ended. Any program fault that we find could be a reason for rejection of your program. Be sure to document operational peculiarities both for the reviewer and the end user. An example of one common program fault would be the lack of testing for both upper and lower case keys (e.g. "Y" or "y" for YES). There is nothing wrong with a program that only responds to upper case as long as the user is informed that the

CAPS LOCK key should be down when operating the software. A good test for your program is to have another user in your area who is unfamiliar with your product attempt to operate it.

These points are some of the most important you should consider when generating software to be submitted to the Heath/Zenith Users' Group. As you can see, developing a solid software product requires a new attention to detail whether you intend your product to be released through HUG or whether you intend to offer it through other channels. We have found that software which was developed following the basic information supplied here generates fewer user problems and, in general, gains the acceptance and respect of a vast majority of the user community.

Once you feel that your software will meet the requirements of the various HUG Software Libraries, please submit your material to the following address:

The Heath/Zenith Users' Group
Attn: Software Coordinator
Hilltop Road
St. Joseph, MI 49085

Ordering Information

HUG Software Products are ordered as a standard Heath Company Part. The order can be mailed on a Heath Company Parts Order Form or on a separate sheet of paper. When ordering, include with your payment the following information:

1. The part number (p/n), quantity, and description of the product to be ordered,
2. your name, address and HUG ID number, and
3. 10% postage and handling, up to a maximum of \$5.00, minimum of \$1.00. UPS is \$1.75 minimum with no maximum. UPS Blue Label is \$4.00 minimum.
4. Visa & MasterCard also accepted, minimum \$10.00 order.

Send the order to:

Heath Company Parts Department
Hilltop Road
St. Joseph, MI 49085

For Visa and MasterCard phone orders; telephone Heath Company Parts Department at (616) 982-3571. Have the part number (p/n), description, and quantity ready for quick processing.

Note: HUG currently offers formats for CP/M, HDOS, ZDOS, MSDOS and CP/M-86 5-1/4 inch disks:

Single sided, single density, hard-sectored
Single Sided, single density, soft-sectored
ZDOS double sided
MSDOS double sided
CP/M-86 double sided

To order soft-sectored, add a "-37" to the part number (p/n) of the product (e.g. 885-1207-37). Your order is processed by part number (p/n), not by description, so please be sure to include the "-37" when ordering soft-sectored.

The Heath Company Parts Department is NOT capable of answering questions regarding software. For additional information concerning any of the HUG software products, contact the Heath/Zenith Users' Group (616) 982-3463.

If you should have a problem with a HUG product, please call HUG to determine if you have a bad disk or another problem before you return the product for replacement. A call may save you a lot of time and money. If it is determined that your disk requires replacement, return the original disk along with the invoice directly to the Heath/Zenith Users' Group, Attention: Software Coordinator.

Change of Address

If you change your address, be sure to let us know. REMark is sent via bulk mail and is not forwarded. It takes approximately six weeks for our system to cycle through. Therefore, take this delay into consideration along with mail delays when notifying us. **Please tell us when the change is to take effect.**

Use the form in the back of this issue or a suitable copy to change your address. Send it directly to:

The Heath/Zenith Users' Group
Attn: HUG Secretary
Hilltop Road
St. Joseph, MI 49085

HUG Bulletin Board via MicroNET

MicroNET is a time-share system of CompuServe Inc., which most anyone, located near a major city, can access through a telephone link. The National HUG Bulletin Board or SIG (Special Interest Group) on MicroNET provides a way of sharing ideas, questions, and information with over 3000 other members, by simply dialing a number and leaving a message.

MicroNET membership applications are available through the HUG Library or through any Heath/Zenith Computers and Electronics Center. The package includes free modem software, as well as the necessary information about CompuServe and one hour of free time on the system (see HUG Price List for further details). This membership is separate from the HUG membership application. For further information about CompuServe, contact the Heath/Zenith Users' Group, or CompuServe Inc., 5000 Arlington Centre Blvd, Columbus, OH 43220, (614) 457-8600.

A booklet of the HUG Bulletin Board commands and command descriptions is now available from the Heath/Zenith Users' Group. This handy reference can be used while on the system to save you both time and money. Since changes are made to the system on occasion, the material contained in the booklet may require some modification by the user in the form of notes as the changes are implemented. The BB-Reference is available as HUG part number 885-4700.

New For 1986 — HUGPBBS System

The Heath/Zenith Users' Group has opened a public domain bulletin board system for those programs submitted to the Public Domain Library (See Program Submittals.) You may obtain public domain packages by signing up for access to the bulletin board system available at (616) 982-3956. You may become a member of the system simply by supplying your name and HUG ID number in a message to the SYSOP. Programs are available under HDOS, CP/M, ZDOS and MSDOS in convenient catalog areas.

Special Interest And Local HUG Groups

One of the best sources for information and help is the Local Heath Users' Groups which are becoming a major voice for the Heath/Zenith user community. Many of the local groups can be

contacted through your nearest Heath/Zenith Computers & Electronics Centers. These stores can usually provide you the necessary contact information. A listing of known Local HUGs is published twice a year with new additions appearing under the category of "Local HUG News" found in most issues of REMark.

Heath/Zenith Related Publications

Of major importance to the new user is the availability of additional information for the Heath/Zenith computer products. Many of the Local HUGs publish newsletters on a regular basis. Using the Local HUG Club listing appearing in this issue, the user can select those clubs that may produce additional documentation.

Three excellent independent publications are listed here:

BUSS Newsletter

PROGRAM SUBMITTAL and AGREEMENT FORM

Programmer: _____

Address: _____ City-State _____ Zip _____

Company (if any): _____

Telephone: _____

Program Name: _____

Please describe your program in sufficient detail so that other users may understand its intended purpose and use. The following outline is suggested as a guide to help you in preparing an abstract of your program(s), should your program(s) be selected as a future release of the HUG Software Library. Your outline of the abstract should be prepared and submitted on an attached sheet of paper with this Submittal Form. Be sure to fill out all the information requested on this form.

Suggested Outline:

Introduction:

Requirements:

 Software

 Hardware

List of the Programs:

Program Content:

 Include Special Notes

Comments:

Note: Refer to the HUG Software Catalog for examples and details in using this outline.

Brief information for the Software Evaluator of your program(s):

Prepared on/for computer model: _____

Special hardware/software configurations, if any: _____

Program requires: _____ **bytes of memory**

Language: _____ **Version:** _____

I would like you to include the program(s) described on this agreement in the (check one)

- Public Domain Library
- HUG Software Library
- Royalty Software Library

I understand and agree that HUG may distribute it at nominal cost to HUG members.

I assure you that the program is my own design, that I have run and de-bugged it, and that I will answer questions any library user may have about it. You may modify and adapt the program at your option to make it more suitable for your use and the library.

I represent that the program is mine to submit and that any necessary permissions for its use and sale have been obtained.

Date: _____ **Signed:** _____

DSKLBL.BAS

Version 1.4

Roger Boehlein
6407 Velma Avenue
Parma, OH 44129

How many times have you fumbled through your disks and wondered which type of disk it is. Is it HDOS or CP/M, and is it hard sector or soft sector. If you're like me, you probably have quite a collection of disks, and at times, it can be frustrating trying to figure out which is which. Not everyone has the bad habit of not marking their disks, but for those of you who do, read on.

The following short program DSKLBL.BAS should help you keep your disks in order. The program, as is, was written in Microsoft BASIC under the CP/M operating system. For you HDOS users, see the note at the end of the article for converting it to HDOS.

The program itself is very simple and straight forward. After being asked for how many labels you wish to print, it simply enters a print loop until the proper number of labels have been printed. The only line that is hardware dependent is line 70. Currently, it is set up to put the H-25 printer in an 8LPI mode. The only thing needed is to change line 70 to the proper codes for your type of printer. If you do not need to set your printer to 8LPI, then just eliminate line 70.

The label size I use for this program is 1-3/8 by 3-1/2 inches. When done, you will have a handy label that will help you keep track of which type of disk you have. When all the information is filled in, you will be amazed at how simple it is to keep track of your disks. I hope someone can make use of this simple, but helpful program.

Notes For HDOS Users . . .

For those of you who only run HDOS, this program will work equally well. The changes are simple. Add line 55 as follows: 55 OPEN "O",1,"LP:" and change all the LPRINT statements to PRINT #1. Add the following line number 185 CLOSE #1. Remember to LOAD LP: before you run the program. Enjoy.

```
10 ' DSKLBL.BAS VER 1.4 07/09/85 R. BOEHNLEIN
20 PRINT CHR$(27)+"E"
30 INPUT "How many labels do you wish to print? : ".A

A Tight C/80 Environment

This is all about how to do big computer things on a little computer and a tiny budget. Specifically, how to run C/80 and the C/80 Mathpak on an H-89 with a single hard-sector drive and HDOS. For openers the C/80 compiler v3.1, the Mathpak enhancement and Pie editor from Software Toolworks in Sherman Oaks, California total about \$112 postpaid. That's not bad for the powerful programming environment they provide. It's a lot of software and you won't even come close to packing it all on one disk. A certain amount of organization is called for.

First, grit your teeth and buy an extra box of disks. You'll need seven for this system. (As of Spring, 1985 they were only about fifteen dollars a box at the Heathkit Store.) This is in addition to backup copies of distribution disks. INITIALize the following labels:

PIE — STANDALONE, onecopy, for C source

C — source files, ints and chars

C/80 — ints and chars, multi-source compiler

AS — ints and chars, multi-source C assembler

C — source files, floats and longs

C/80 — floats and longs, multi-source compiler

AS — floats and longs, multi-source C assembler

At this point, I made sure that both the coffee pot and my tobacco pouch were full. By the time all seven disks are ready to use, you'll be a ONECOPY expert.

PIE — STANDALONE, Onecopy, For C Source

Start with a system volume generated by SYSGEN/MIN. Bring in SET.ABS to SET HDOS STANDALONE, then delete SET.ABS. (This shouldn't be your first experience with HDOS STANDALONE if you're running a single drive; but if it is, don't be put off by the slightly strange warning message that appears on your screen. It's just Gordon Letwin's way of reminding you that you're using an unsupported feature of HDOS.) Reboot to make sure the disk remembers it's been SET to STANDALONE. System files and PIP.ABS will already be in place, from SYSGEN/MIN. You'll also need ONECOPY from the HDOS files and PIE from the Software

Toolworks disk. You get a number of configuration choices for PIE, but I like it as is for writing C source code. Later on, we'll consider some optional files, but for now that's it for this disk. It provides a place to write programs along with the means to transfer them to the next process. It also supplies the operating system for the assembler, freeing up some desperately needed file space there.

C/80 — Ints And Chars, Multi-source Compiler

If the universe was truly benign, you would just RESET SY0: to swap from the PIE disk to this one; but you can't. The compiler needs the overlay space in RAM, so you'll just have to do another SYSGEN/MIN and do not SET HDOS STANDALONE, ONECOPY C.ABS to this volume.

Some of the C library files contain #ifneed directives to enable the compiler to include only those functions that are actually used in your program. STDLIB.C is one of these, and for that reason, should be on the compiler disk. PRINTF.C is another story; it can be assembled and placed on the AS disk to be incorporated into your program there. A couple of tricks are needed; here's how they work:

Compile PRINTF.C with the command line:

```
">C -L30000 PRINTF"
```

This will suppress inclusion of the C run time package and keep the intermediate file labels out of the way of the rest of your program. (See section II of your C/80 manual, "Multiple Compiles Using AS.") When a library function is included in this way, the header file PRINTF.H must reside on the compiler disk to be included by your source file. You might just as well save some typing later on with a small addition to PRINTF.H. Load it in PIE and add the following three lines to the end:

```
        #asm
        XTEXT  PRINTF.ASM
#endasm
```

If you don't put these three lines here you'll have to add them to every program that needs printf().

AS — Ints And Chars, Multi-source C Assembler

This is an easy volume to set up; all it needs — after INITIALIZING — is the PRINTF.ASM you just compiled, PIP.ABS, AS.ABS, and CLIBRARY.ASM; no SYSGEN. The STANDALONE PIE disk will supply the operating system.

C — Source Files, Ints And Chars

Here's a place to park the source code for stuff you're working on, as well as all the handy utility functions you know you'll need sometime. There's no room on the working disks for anything but jobs in progress right now, but you'll still want those support files where you can find them easily. PIP.ABS is needed so you can tell what you have, and how much. I also use the MORE program (The version by W. S. Hall, REMark Volume 5, Issue 8, August 1984 p60) to browse through files. No need to SYSGEN this disk, you can RESET SY0: to this one from a STANALONE volume.

For a check on what you've accomplished so far, take a look at the directories of the disks you've set up. They ought to look something like this:

PIE — STANDALONE, Onecopy, For C Source

6 Files, Using 65 Sectors (320 Free)

Assuming everything is there, it's time to try it out. This part of the system is for programs that do not use the MATHPAK enhancement. After it's been proven to work, there will be time enough to go on to the remaining three disks which support 32 bit data types, transcendental functions and the like.

A Functional Demo Program

Listing 1 is the source code for a limited imitation of the UNIX utility, grep. It looks to see if a specified ASCII string exists in a named file. This is handy if you should forget which files contain what. Like, "Is this the version that has my bookie's name and address in it?" Run `ingrep` and find out. The original `grep` gets the string to search for and the name of the file to search in from the command line. That's not too useful in HDOS — or C/PM either, by the way — since our operating system won't return lower case

letters from the command line; it converts them to upper case, making it impossible to ask for a string that uses both cases. Instead, `ingrep` prompts the user for the search string and the file name.

Boot the volume labeled:

PIE — STANDALONE, Onecopy, C Source

Bring up PIE and type in the source code for `ingrep.c`. ONECOPY the source file to the disk labeled:

C/80 — Ints And Chars, Multi-source Compiler

and reboot this compiler disk. At the HDOS prompt, type "`ingrep`" and `<RETURN>`. If there are no compiler errors, reboot the PIE disk to get ONECOPY, so you can copy `ingrep.asm` to the disk labeled:

AS — Ints And Chars, Multi-source C Assembler

When the copy operation is complete and you get the `:OC:` prompt, type `/MOU` and put the assembler disk back in the drive. Now hit Control-D and both the assembler and `ingrep.asm` are ready to go. At the HDOS prompt, type "`as ingrep`" and `<RETURN>`. When assembly is complete, without errors, you have `ingrep.abs`. You can try it out right away by typing "`ingrep`" and `<RETURN>`. Answer the prompts, telling the program to search `ingrep.asm` for the string, "`read_fil`". (Don't type the quotation marks or the period.) Try asking `ingrep` to find the string, "`doodle`," in `ingrep.asm` just to see what it says. Play with `ingrep` until you get tired of it, then get out the last three disks for the Tight C/80 Environment.

```

} /* go back to main() */
printit() /* print file line if it contains search string */
{
  int i; /*
  i = 0;
  if (index(fil_ln,line) >= 0) { /* if line contains string then.
    flag = 1, /* set flag to 1,
    while ((putchar(fil_ln[i++])) != '\0'); /* print the line,
    putchar('\n'); /* and add a newline.*/
  } /* go back to read_fil() */
#include <stdlib.c> /* including stdlib.c here insures that only those
/* end */

```

```

The sine of 3.141593 is 0
 The cosine of 3.141593 is -1

C/80 — Floats And Longs, Multi-source Compiler

ONECOPY C.ABS and CCONFIG.ABS from the C/80 distribution disk. Run CCONFIG and type "N" to enable floats and longs. Now you can delete CCONFIG.ABS and bring in copies of MATHLIB.C and FPRINTF.C from the MATHPAK distribution disk. Compile FPRINTF.C with the command line:

```
>C -L30000 FPRINTF
```

ONECOPY FPRINTF.ASM to the floats and longs assembler disk and delete both FPRINTF.C and FPRINTF.ASM from the compiler disk. Put STDLIB.C on the compiler disk and FPRINTF.H, from MATHPAK, on your PIE disk and add the following lines to the end of FPRINTF.H:

```
#asm
    XTEXT FPRINTF.ASM
#endasm
lf dum()
{
    float fdum;
    long ldum;

    fdum = 1.5 + .5;
    ldum = 70000 + 7;
}
```

The dummy function guarantees that the long and float libraries will be loaded, avoiding some possible errors on assembly. (On one occasion, I managed to generate 1881 assembler errors complaining of undefined labels. If you can top this, you have my sympathy. With lf dum() in place, that sort of disaster is less likely.) The only external identifier here is the function name, so you shouldn't use it anywhere else; but the variable names are local and can't interfere with anything.

FPRINTF.H can now be ONECOPYed to the compiler disk. I RENAMED it PRINTF.H. You don't have to; but so help me, sometimes I start to write source code before I know whether I'll need floats and longs. Then, I usually forget to change printf.h to fprintf.h at the top of the program. Suit yourself. Your compiler for 32 bit math should look about like this:

C/80 — Floats And Longs, Multi-source Compiler

Name	.Ext	Size	Date	Flags	28-May-85
HDOS	.SYS	31	26-May-85	SLW	
HDOSOVLO	.SYS	26	26-May-85	SLW	
HDOSOVLI	.SYS	11	26-May-85	SLW	
SYSCMD	.SYS	12	26-May-85	SLW	
PIP	.ABS	19	26-May-85	S	
SY	.DVD	10	26-May-85	SL	
C	.ABS	152	27-May-85		
MATHLIB	.C	18	27-May-85		
PRINTF	.H	2	27-May-85		
STDLIB	.C	21	27-May-85		

RGT	.SYS	1	26-May-85	SLW
GRT	.SYS	1	26-May-85	SLW
DIRECT	.SYS	18	26-May-85	SLW

13 Files, Using 328 Sectors (62 Free)

AS — Floats And Longs, Multi-source C Assembler

FPRINTF.ASM should already be here, copied as soon as it was compiled. You also need FLOATLIB.ASM, LGFLTILIB.ASM and LONGLIB.ASM from MATHPAK along with AS.ABS and CLIBRARY.ASM from the C/80 compiler distribution disk. The floats and longs assembler disk ought to look like this:

AS — Floats And Longs, Multi-source C Assembler

Name	.Ext	Size	Date	Flags	28-May-85
SYSCMD	.SYS	12	26-May-85		
PIP	.ABS	19	26-May-85		
FPRINTF	.ASM	38	27-May-85		
FLOATLIB	.ASM	44	27-May-85		
LGFLTILIB	.ASM	9	27-May-85		
LONGLIB	.ASM	15	27-May-85		
AS	.ABS	52	27-May-85		
CLIBRARY	.ASM	31	27-May-85		
RGT	.SYS	1	26-May-85	SLW	
GRT	.SYS	1	26-May-85	SLW	
DIRECT	.SYS	18	26-May-85	SLW	

11 Files, Using 246 Sectors (144 Free)

C — Source Files, Floats And Longs

The only difference between this volume and its ints and chars counterpart is the name.

Transcendentals And 32 Bit Arithmetic

The tight C/80 Environment is now complete and it's time to try the MATHPAK enhancement. Listing 2 won't earn a place in your library of utilities, but it does show how C/80 handles 32 bit math. You can go through the same sequence of operations you did for ingrep.c; just use the floats and longs versions of the compiler and assembler.

TRY2.C computes and prints the sine and cosine of 0, pi/6, pi/4, pi/3, pi/2 and pi. Notice that the program begins with, "#include <printf.h>." If you didn't rename fprintf.h you'll have to remember which one to use. The array is declared static so it can be initialized. Values in the array will be multipliers for pi. Inversions were used because I wanted to include an angle of 0 radians and pi/0 won't work, will it? To give you something to check against, Listing 3 shows the output of TRY2.C.

Additional C/80 Library Functions

Earlier, I mentioned some optional files for the PIE disk. That's where I keep SEEK.C and EXEC.C. They can be copied temporarily to a compiler disk whenever they're needed. You could, for instance, compile a module that does nothing but file house-keeping; then incorporate it into your object code in the AS assembler. Since AS will work under HDOS STANDALONE, there is more disk space to combine modules with the assembler than with the compiler.

You can't spend too much time studying the C/80 manual, especially section 11, "Multiple Compiles Using AS." Section 15.4, "Defining Globals in Header Files," describes a particularly useful trick. The Tight C/80 Environment will give you room to work. You can put together programs that are quite large; and C/80 certainly provides the power.

About The Author

Don Keller, a middle-aged tech bum, graduated in 1960 from DeVry Technical Institute and wandered all over the United States ever since, working sometimes as an electronic technician and sometimes as a musician. In 1977, he began a series of heart attacks restricting his activities. In 1980, a Silicon Valley entrepreneur gave him a laid-back, part-time job in a California coast village. The work forced him to learn something about programming and he discovered that he liked it. He, eventually, moved back to his hometown of Port Angeles, WA where he attends Peninsula College trying for a math major.

Money is darned hard to come by so I want to express my appreciation to Heath/Zenith, for making older computer models available at much reduced prices; and to The Software Toolworks for programmer's tools at such reasonable prices.

PRNSPOOL - Print Spooler

FOR YOUR Z100 OR Z100PC COMPUTER

Now you don't have to wait for your printer before you can use your computer. **PRNSPOOL** provides you with the following benefits:

- ★ NO WAITING FOR PRINTERS OR PLOTTERS TO FINISH
- ★ NO HARDWARE CHANGES REQUIRED
- ★ WORKS WITH ANY PRINTER/PLOTTER
- ★ WORKS WITH MULTIPLE PRINTERS/PLOTTERS AT THE SAME TIME
- ★ WORKS WITH ANY SOFTWARE PROGRAM
- ★ COMPLETELY CONTROLLED BY DOS COMMANDS
- ★ CAN BE CONFIGURED FOR YOUR ENVIRONMENT

PRNSPOOL now available *only* **\$39.95**

So stop waiting for your printer, and order **PRNSPOOL** today!

Call or write for more information or a FREE Product Catalog

For Faster Delivery
Call 906-249-9801

PRNSPOOL installs as a device driver and requires V2.0 or higher of MS-DOS/PC-DOS. Please specify computer model when ordering. Add \$3.00 shipping/handling for all orders and 4% sales tax for Michigan residents.

HOME FINANCE SYSTEM VERSION 2

—An extensive Home Finance System that keeps track of checking, asset accounts (cash, savings, IRAs, CDs), and regular bill payments. Let your printer write your checks for you on **any** business-sized check (design your own check format).

—Checks have user defined codes and a separate flag for tax deductible items.

—Many reports, including listing all checks, or checks by codes or tax flag.

—System consists of 130 page users manual with 5 program disks (5-1/4") and a sample data disk.

Hardware: H8/HZ89 (64K) or HZ100 with 2 disk drives. Any Heath®, Zenith® or other printer.

Software: CP/M or CP/M-85/86 (Ver. 2.2) and MBASIC 5.21 for CP/M.

Order: Complete System \$89† (specify hard or soft sector 5 1/4", HZ89 or HZ100). Manual alone \$21.†

MasterCard/Visa accepted, please include your phone number.

†Prices include shipping.

Quality Products and Support for the Heath/ Zenith Community

New for the H/ Z89-90 Computer Users: The Super RAM 89 Package

Now get the speed and power of a high capacity Ram Drive System at a reasonable price.

Using the Ram 89 package, standard software shows an immense improvement in speed. Depending on the software being run, programs may execute 10 times faster than when run through standard floppies.

Now get RAM 89
HDOS DRIVER Software Only \$35

RAM 89 DVD supports RAM SY0: and SY1:, added autoload features, plus more!

The Ram Drive Software (SRAM) allows one or two logical ram drives. The ram drive(s) can be located starting anywhere from logical A: to O: (standard drives get relocated). SRAM can be set to start at logical A: and warm boot with ram (no floppy disk accesses needed). Ram drive attaches to any of the versions of CP/M 2.2 bios used in the H/Z89-90.

GET A FULL MAGABYTE OF RAM FOR YOUR H/Z89-90

Board 1 includes hardware manual and ram drive software with no ram: \$190.00. Each 256k bank, add \$56.00. Board 2 (must have board 1). With no ram, no clock, no SASI \$90.00. Each 256k bank, add \$56.00. Ask about clock, SASI pricing.

Ram 89 comes as a two card set that plugs into the left hand (16k expansion) side of the computer. No computer modifications required.

Board 1 has two banks of 256k chips possible for a total of 512k. Either or both banks are able to use 64k chips instead. Board 1 can be used by itself, with board 2 added at a later date.

Board 2 has an additional 512k, plus it has a real time clock capability, and a SASI interface hardware capability. Board 2 piggybacks onto board 1.

FOR THE H/ Z89-90 COMPUTERS

THE ONE CONTROLLER
FOR 8"
& 5.25"
DRIVES
THE
FDC-880H
PRICE: \$395

Includes controller board CP/M boot prom, I/O decoder prom, hardware/software manuals BIOS source listing. HDOS driver now available for \$50.00.

Now be able to run standard 8" Shugart compatible drives and 5.25" drives (including the H37 type) in double and single density, automatically with one controller. The FDC-880H operates with or without the Heath hard sectored controller.

THE FDC-H8 DOUBLE DENSITY 8" AND 5.25" CONTROLLER FOR THE H8 COMPUTER PRICE \$495

Has all of the capabilities of our popular FDC-880H controller, with added features:

- Direct memory access (DMA) data transfer
- Hard sectored controller (H17) incorporated on the board.
- Runs with the standard 8080 CPU card and with Z80 CPU upgrades.

MODIFY89

Allows owners of the FDC-880H or the FDC-H8 to read/write to the following disk types:

Access S.S.D.D., Cromemco S.S.D.D., DEC VT180 S.S.D.D., IBM PC/ Zenith 100, (CP/M) D.S.D.D.*, Kaypro II S.S.D.D., Morrow Micro Decisions S.S.D.D., NEC PC-8001 A S.S.D.D., Osborne S.S.D.D., Osborne S.S.D.D., Otrona D.S.D.D.*, Zorba D.S.D.D., TI Professional S.S.D.D., TRS-80 Model I (Omnikron CP/M), TRS-80 Model III (MM CP/M), Xerox 820 S.S.D.D., Xerox 820-IIS.S.D.D. Plus more, Standard (Tests for H/Z37 and C.D.R. Disk types)

PRICE \$49.95

FOR THE Z100 COMPUTERS

THE ORIGINAL
Z100 SPEED
MODULE. RUN
YOUR Z100 PRO-
GRAMS FASTER

The ZS100 runs the Z100 CPU 50% faster, (7.5 MHZ) in 8088 mode. The ZS100 installs easily with no soldering. The ZS100 is externally switchable between speed mode and normal. The ZS100 improves the time performance of applications packages with no software modifications needed. The ZS100 is for all Heath/Zenith 100, 110 and 120 series computers.

SUPER DRIVES 85

A powerful floppy drive package for the Z100 or any computer that can use 8" floppy drives.

Two extended technology 5.25" drives in a package with interface cables, case and power supply, that look exactly like standard 8" floppy drives to the computer. Now have 2.4 megabytes of floppy file storage capacity in one 5.25" package.

Excalibur

Mass storage solutions from Anthem Systems

State-of-the-art design, performance, aesthetics, and convenience for the Heath/Zenith computers; all Winchester drives and controllers covered by one-year warranty.

FOR THE H/Z100 COMPUTER INTERNAL 10 to 30 MB Formatted

Includes: Winchester disk drive, controller, cables, boot ROM, and all necessary software. Uses existing power.

EXTERNAL 10 TO 116 MB Formatted

Includes: All of the above items, completely assembled and tested, mounted in F.C.C. and U.L. approved case with power supply, fan, and shielded cable.

FOR THE IBM PC/XT-COMPATIBLES

INTERNAL 10 to 30 MB Formatted

Includes: Winchester disk drive, controller, cables, software, boot ROM, and all necessary software. Uses existing power.

EXTERNAL 10 TO 116 MB Formatted

Includes: Controller, High-Performance Winchester disk drive, completely assembled and tested, mounted in F.C.C. and U.L. approved case with power supply, fan, and shielded cable.

Cartridge Tape Backup 45/60 MB

Internal Includes: Controller, cables, tape drive, and software. Uses existing power.

External Includes: Controller, tape drive, software, completely assembled and tested, mounted in F.C.C. and U.L. approved case with power supply, fan and shielded cable.

10 MB and 20 MB (per reel) Tape Backup- Uses Existing Floppy Controller

Internal Includes: Cables, tape drive, and software.

External Includes: Tape drive, software completely assembled and tested, mounted in F.C.C. and U.L. approved case with power supply, and fan.

Performance.

Introducing EasyPC™ from UCI. The most advanced IBM PC emulator you can buy for your Z-100. First to provide the compatibility, speed and audio support to make your Z-100 run like a PC. Since the EasyPC provides complete PC circuitry, you actually run PC programs on PC hardware. Quite simply, it's like installing a PC right inside your Z-100. In the PC mode, your Z-100 can run virtually the entire library of PC programs, including LOTUS 1-2-3, dBase III, FLIGHT SIMULATOR,

and most other copy-protected software. In the Zenith mode, your Z-100 is a Z-100, with no change in performance.

EasyPC is fast. In fact, it is noticeably faster than both the Z-150 and the IBM PC. And EasyPC can run at either 5 or 8 MHz. It supports both floppy and Winchester drives, provides crisp color video graphics, supports PC-compatible sound generation, and even comes with its own self mounting speaker.

Quality.

You already know and appreciate the kind of quality and reliability that is built into your Z-100. UCI matches that commitment to quality from first step to last.

Sophisticated engineering and quality components combined with precision automatic assembly, component burn-in, and both in-circuit

and full functional testing, mean superior performance and long term reliability.

EasyPC's advanced circuitry utilizes two, high quality, S-100 multilayer boards and a piggyback board. Yet its ingenious design requires only *one extra slot*. So you get all the advantages of PC compatibility, with room to spare.

Availability.

EasyPC is ready when you are. If you've been waiting too long for PC compatibility, your wait is over. EasyPC is here now. Complete documentation is included for quick and easy installation,

so you'll be up and running fast. Your only problem will be which PC programs to get first.

EasyPC is available through your independent Zenith dealer. Ask him for a demonstration.

Price.

At \$699, you'll pay a little more. But you'll get the best. Total compatibility. High speed performance. Unsurpassed quality and serviceability. In a word, value. You also get UCI's one year Solid

Service Guarantee and full customer support. If you have any questions or problems with any UCI product, or need the name of your nearest dealer, just call 800-UCI-COMPUTER.

EasyPC™

Full IBM PC emulation for your Z-100.

CORPORATION
948 Cherry Street, Kent, Ohio 44240
(216) 673-5155 / 800-UCI-COMPUTER

Comments: Consultation available. Products: Repair, upgrades, and modifications of more than 25 manufacturers of computers and peripherals; specializing in Heath/Zenith. Work done on-site (Chicagoland) or carry/mail-in. Special Notes: Mention your membership when contacting us for current specials.

Richmond Computerware

15807 Kenbrook
Missouri City, TX 77489

Contact: Jerome E. Banasik, P.E. Phone: (713) 437-8188

Comments: Hardware, software and consultation available. Products: Hardware — Disk Drive Shielding/Mounting Kit for H/Z-89. Panasonic 5-1/4" disk drives. R-67 internal hard disk system for H/Z-89. Software — Process control engineering programs. Special Notes: Accepts contractual hardware and software work.

Rick Lutowski (Formerly MICROTRAN)

76 Flintwell Way
San Jose, CA 95138

Contact: Rick Lutowski Phone: (408) 226-4122

Comments: Software and consultation available. Products: FORTRAN support for HDOS: library manager, "CORE" graphics package; AM9511/AM9512 math libraries; overlay package; console I/O, sorting, metric conversion, bit manipulation, and HDOS interface libraries. Special Notes: Most libraries are interdependent. All include source code, documentation, and sample program on H-17 disk.

Robert J. Stalder

3508 Furey Avenue
Madison, WI 53714

Contact: Bob Phone: (608) 241-5483

Comments: Software and consultation available. Products: Maps out, on your terminal, 8 lines of information on the computer byte or word. Input can be in octal numbers or decimal bit numbers. Special Notes: At \$49.95, an aid to H-11 or PDP-11 assembler programmers, students and hobbyists.

Ross Custom Electronics

1551 Sandra Drive
Boulder City, NV 89005

Contact: J. D. Ross Phone: (702) 293-7426

Comments: Hardware, software and consultation available. Products: IntelliBurner EPROM, EEPROM, and 87XX Microcontroller Programmer \$299.00 (or PC Board \$99.00). NEW! IntelliBurner RAM option for standalone operation \$89.00. Other

RS-232 Serial Programmers from \$149.00 — PC Boards from \$39.00. Special Notes: Complete software support included — HDOS, CP/M, ZDOS, and MSDOS. UV lights and accessories available.

S&K Technology, Inc.

4610 Spotted Oak Woods
San Antonio, TX 78249

Contact: Steve Robbins Phone: (512) 492-3384

Comments: Software and consultation available. Products: WatchWord — Powerful word processor of the H/Z-100. The Resident Speller Z-100 Version — Designed for use with WatchWord to give as-you-type checking. The Resident Speller PC Version — Designed to be used with most word processors for as-you-type checking.

Sammamish Data Systems, Inc.

1413 - 177th Avenue, NE
Bellevue, WA 98008

Contact: Richard H. Schweitzer, Jr. Phone: (206) 644-2442

Comments: Software available. Products: Census Data System allows preparation of reports from 1980 Census data for micro-computers. DIDS prepares thematic maps of statistical data. QuickMap budget priced mapping software. Special Notes: Census Data System and DIDS available for Z-100, Z-150, Z-200. QuickMap available Z-150 and Z-200.

San Diego Scientific

815 Third Avenue #301
Chula Vista, CA 92011

Contact: Jack Stevenson Phone: (619) 425-2262

Comments: Hardware and software available. Products: Gemini Board, Z Power 150. Special Notes: Authorized Distributor for Gemini.

Secured Computer Systems

8575 Knott Avenue, Suite D
Buena Park, CA 90620

Contact: Linda, Lowell or Ken Phone: (714) 952-3930

Comments: Hardware, software and consultation available. Products: 16K RAM expansion card; 2 port serial, 3 port parallel interface and Real-Time Clock, all these modules are for the H/Z-88/89/90. Special Notes: We do module repairs for the Zenith product line.

Sextant Publishing Company

716 E Street, S.E.
Washington, DC 20003

Contact: Gabriele Burkhard Phone: (202) 544-0900

Products: Sextant magazine and Buss newsletter are independent publications for users of Heath/Zenith microcomputers. Sextant — \$14.97/6 issues (1 year); Buss — \$28.00/20 issues (1 year).

* Requires access to "foreign" computer

"MAKE YOUR Z-150 CP/M COMPATIBLE"

Intersecting Concepts Announces 3 Solutions To Solve Your Computer Incompatibility

But will it work on my computer? Yes! Finally, there are three easy ways to exchange information, transfer files, and run CP/M software on MS-DOS machines.

1. **MEDIA MASTER** is our direct disk-to-disk format conversion program. Already an accepted industry standard, this \$39.95 program uses simple screen prompts that lets you read, write and format up to 70 different 5¼" diskettes from CP/M, MS-DOS and PC-DOS operating systems.

So if you work on a IBM PCompatible at the office, but use a CP/M computer at home, now you can easily transfer files that would otherwise be "foreign" to your computer's operating system.

2. **MEDIA MASTER PLUS** goes one step further by converting 8-bit CP/M software to run on 16-bit MS-DOS and PC-DOS machines. This newly released \$59.95 product combines our IBM-PC version of Media Master with ZP/EM, a powerful new emulation program. The results are amazing:

CP/M programs using 8080 instructions *and* data can be transferred from popular computers like Osborne, Kaypro and Zenith to run on MS-DOS and PC-DOS machines!

3. **ACCELER-8/16** is also new and dramatically improves the performance of Media Master Plus by tailoring the CP/M emulation around a NEC V20 microchip. This chip simply replaces the 8088 processor in your MS-DOS computer. Once installed, it'll run your CP/M and MS-DOS

software much faster. (Speed improvements are roughly 15% faster in MS-DOS and 350% faster in CP/M!) With ACCELER-8/16 your MS-DOS computer is now CP/M compatible for only \$99.95!

The Choice Is Yours

So if you just need to exchange files between different computers using different operating systems, there's Media Master at \$39.95.

If you're upgrading to an MS-DOS or PC-DOS machine or already have one but don't want to spend money buying "new" software programs you already own, there's Media Master Plus for \$59.95.

And if the execution speed of your CP/M programs is important, there's ACCELER-8/16 for \$99.95, which provides a simple hardware and software solution to making your MS-DOS computer CP/M compatible. All three solutions save you money by eliminating expensive modems and communications software.

To Order

To order Media Master, Media Master Plus, or ACCELER-8/16, call 800-824-7888, and ask for operator 251. For additional product and upgrade information contact:

Intersecting Concepts, Inc.,
4573 Heatherglen Ct., Moorpark, CA 93021

or call 805-529-5073.

Comments: Software available. Products: Small business, Home Productivity, Entertainment, and Educational software available. Special Notes: Catalog available upon request or order direct from Sierra.

SigmaSoft and Systems

4488 Spring Valley, #107
Dallas, TX 75234

Contact: Clay D. Montgomery Phone: (214) 392-1024

Comments: Hardware, software and consultation available. Products: High Resolution Graphics, RAM Drive, and Print Spooler upgrade for the H/Z-89 and H/Z19-H8 systems \$495. Complete 10 and 20 Megabyte Winchester hard disk subsystems for HDOS and CP/M with Z-37 floppy controller emulation priced from \$945. Special Notes: We specialize in supporting the H/Z-89 and H-8 user. We have one of the broadest lines of high performance upgrade products for these systems.

Skycastle Computer Products

P.O. Box 1412
San Carlos, CA 94070

Contact: Mike Krivohlavek Phone: (415) 254-3931

Comments: Software and consultation available. Products: Offers software for dot matrix printers. Programs add an extra touch to your printed documents by combining graphics and custom fonts with standard text.

Softquest, Inc.

P.O. Box 3456
McLean, VA 22103

Contact: Susannah Rosenberg Phone: (703) 281-1621

Comments: Software and consultation available. Products: A personal and small-business financial management program, The Smart Checkbook, accommodates sophisticated financial needs while remaining simple enough for novices to use. It produces complete financial records, including budget reports, net worth statements, tax records, custom reports and summary tables. Money market, checking, savings, credit card and cash accounts can be organized with as many as 200 budget and 200 tax categories, and any amount split among 15 possible budget and tax categories. Special Notes: Available for Zenith Z-100 (Z-DOS and CP/M-80); Z-150, Z-160 (PC-DOS); Heath/Zenith 89 (CP/M 5-1/4" and 8").

Software Applications of Wichita

2204 Winstead Circle
Wichita, KS 67226

Contact: Nat Addleman Phone: (316) 684-0304

Comments: Software and consultation available. Products: Tax-Aide Plus — Prints ALL forms including 1040 and 1040A; 22 forms; worksheets \$59.95. TaxAide Personal — Prints all forms except 1040 and 1040A; 12 forms; worksheets \$29.95. Special Notes: Prints IRS submittable forms while using only 192K of memory. Requires Lotus 1-2-3, 360K drives.

Software Solutions, Inc.

12 Cambridge Drive
Trumbull, CT 06611

Contact: Andrea M. Bugen Phone: (800) 243-5123

Comments: Software available. Products: DATAEASE(TM) is a fully relational menu driven database management system.

DATAEASE helps you gather, file, and maintain information about your business. It can fully automate every aspect of your business (accounting, personnel, sales, production) and integrate all these functions by providing information flow between them. You can also use DATAEASE with mainframe computers to distribute information to other departments or offices. Even the first time computer user can start using DATAEASE in minutes. However, it also offers significant productivity gains to the experienced programmer. Special Notes: DATAEASE runs on the Zenith Z-150 and Z-160.

Software Store, The

706 Chippewa Square
Marquette, MI 49855

Contact: Rod Aldrich Phone: (906) 228-7622

Comments: Software and consultation available. Products: We provide the following PC-DOS and CP/M-80 software: Master-Com for telecommunications; Disk Fix for File Recovery; Program Map for BASIC Cross Reference; and INFO-80 for Application Development. Special Notes: 30 day money back guarantee on all software. Quantity discounts available for multiple purchases.

Software Toolworks, The

14478 Glorietta Drive
Sherman Oaks, CA 91423

Contact: Susan Ann Hayes Phone: (818) 986-4885

Comments: Software available. Products: The Software Toolworks manufactures and sells software for all Heath/Zenith machines. Programs include word processors, programming languages, cookbook software, games, home utilities, spreadsheet, and educational software.

Software Wizardry, Inc.

1106 First Capitol Drive
St. Charles, MO 63301

Contact: Tom Jorgenson Phone: (314) 946-1968
Dale Wilson

Comments: Software and consultation available. Products: Software and hardware enhancement products for Zenith Z-100 and PC series systems. P.O. Box 669
Grants Pass, OR 97526

Contact: William George Phone: (503) 476-1468

Comments: Software and consultation available. Products: 32 Business Management systems including Accounts Payable, Accounts Receivable, Payroll, General Ledger, Financial Statements, etc. For more information contact Thoughtware Publishing Company.

TIGERMARK Corporation

9369 Carroll Park Drive
San Diego, CA 92121

Contact: Steven Strull Phone: (619) 587-9999

Comments: Hardware available. Products: Parallel, Serial, Multifunction, Bubble Memory and Security plug-in cards for IBM Compatible Computers and 64K Universal Serial/Parallel Printer Buffer. Special Notes: TIGERMARK products are available through Heathkit, other computer stores and direct from the manufacturer.

Trionyx Electronics, Inc.

P.O. Box 5131
Santa Ana, CA 92704

Contact: Bill Perry Phone: (714) 830-2092

Comments: Hardware, software and consultation available. Products: Hardware for the H-8 computer: New 16-bit CPU card, 256 KB static memory, double density disk controller handles 8 drives (4 at 5 inch and 4 at 8 inch), 256 KB Dynamic memory, 64 KB Dynamic memory, Z-80 CPU card, Bank select card, reliable replacement motherboard and more.

USS Enterprises

6708 Landerwood Lane
San Jose, CA 95120

Contact: Louise Cate Phone: (408) 997-0264

Comments: Hardware, software and consultation available. Products: The Critical Connection (TM) is a hardware/software product which allows any computer that has a 19,200 baud serial port (and which is running CP/M) to be connected to an Atari 400, 800 or XL. The Atari can be then use the CP/M system's disk drives and printer.

Vertex Systems, Inc.

6022 W. Pico Boulevard #4
Los Angeles, CA 90035

Contact: Nick Stein Phone: (213) 938-0857

Comments: Hardware, software and consultation available. Products: Xeno-Copy — Read, write and format 220 foreign disks in your Z-150 or compatible computer. Xeno-Disk — Xeno-Copy with 8" and Compugraphic MCS typesetter formats, and powerful table driven text translation utility. Apple Turnover — Read, write and format Apple II disks in your Z-150 and Z-151. Pipeline — Translates between spreadsheets, Dbase II, DIF, and Comma Separated file formats. Power Trak — Computerized power monitor. Detects high and low voltage, spikes, sags, brownouts, and high frequency noise. 80Mate — Emulates CP/M environment while running under MS-DOS.

Viking C Systems

2243 South Belaire Drive
Salt Lake City, UT 84109

Contact: Grant Phone: (801) 466-6820
7-9 AM, 5-10 PM

Comments: Hardware, software and consultation available. Products: HISPEED C/80 Library for M80 under CP/M; PI Editor in portable C source; ZDOS and HDOS copy to CP/M; HDOS products with source; WordStar keys and printer sources; Disk Crash utility; Utility for making dual-format CP/M and PC-DOS disks; H-89 4MHz kit; H-89 Eprom Programmer. Special Notes: Free catalog. Source in C or assembler for ZDOS, HDOS, MS-DOS, CP/M-80, CP/M-68K.

Visual Communications Network, Inc.

238 Main Street
Cambridge, MA 02142

Contact: Allison Bartlett Phone: (617) 497-4000

Comments: Software and consultation available. Products: VCN ExecuVision is a presentation graphics software product that allows users to combine multiple text fonts, business data, charts, graphics, and pictures into screens suitable for presentations. EV Capture Plus is a universal interface to VCN's presentation graphics program. It allows the user to "Capture" screens from application programs and store them in an ExecuVision graphic format which can then be enhanced with a variety of graphic functions.

Barry A. Watzman

Microcomputer Systems and Consulting

560 Sunset Road
Benton Harbor, MI 49022

Contact: Barry Watzman Phone: (616) 925-3136

Comments: Software and consultation available. Products: Perks Desktop Utility: CP/M-86, MP/M-86, CP/M Plus (CP/M 3.0) for the Z-100 computer. Consulting services and custom software also available.

Weitzman and Wood Associates

580 NW 99th Way
Pembroke Pines, FL 33024

Contact: Nancy Weitzman Phone: (305) 432-8025

Comments: Hardware, software and consultation available. Products: UN/emulator. Hardware and software which allows you to run CP/M 2.2 at machine speed in a Z-150, IBM-PC or PC clone. Special Notes: Both 5 and 8 MHz 8088/8086 versions available. Also a Z-100 Gemini package.

Westcomp

517 N. Mountain Avenue
Upland, CA 91766-5016

Contact: Dave or Russ Phone: (714) 982-1738

Comments: Hardware, software and consultation available. Products: Software and hardware support for H/Z-100 products and IBM-PC, XT, AT. Entertainment, utilities, language and AI products — Free product info and prices. Special Notes: Many of our products now include the source code at no additional charge!

Wong's Advanced Technologies, Inc.

114 Holy Cross Place
Kenner, LA 70065

Phone: (504) 464-7379

Comments: Hardware, software and consultation available. Products: RAMDRIVE: For Z-100/Z-150, MS-DOS 1.25 and 2.xx. Featuring command line installation/removal, size from 2K to more than 700K. Special Notes: Custom programming/Consulting available. Also discounted Hardware/Software sales.

Woolf Software Systems, Inc.

6754 Eton Avenue
Canoga Park, CA 91303

Contact: Torie Daves Phone: (818) 703-8112

Comments: Software and consultation available. Products: Move-It is a full feature communications program for use between micros and other micros, minis, mainframes, information utilities, bulletin board systems, and telex networks. Special Notes: Consultation by appointment.

Young Investment Research

P.O. Box 670
Glen Ellyn, IL 60138

Contact: Fredric S. Young Phone: (312) 469-1654

Comments: Software and consultation available. Products: Programs for daily stock market analysis and individual stock trading signals. Uses proven and original technical indicators. Demonstration disk \$10.00. Special Notes: Young Investment Research is registered with the S.E.C. as an investment adviser.

The Power Of Z-System

Rick Swenton

19 Allen Street
Bristol, CT 06010

In the November, 1985 issue of REMark, I described the features of ZCPR3, an enhanced Z80-based replacement command processor for CP/M 2.2. ZCPR3 replaces CP/M's standard console command processor (CCP) and provides tremendous power and flexibility. We can now take what we know of the benefits and features of ZCPR3 and move ahead to even greater heights. What Richard Conn did in creating ZCPR3, Dennis Wright did in creating ZRDOS. ZRDOS is an enhanced Z80-based replacement disk operating system. ZRDOS replaces CP/M's standard basic disk operating system (BDOS). When you combine ZCPR3 and ZRDOS you get "Z-SYSTEM". This means that by upgrading your CP/M 2.2, you have replaced so much code that there is nothing written by Digital Research left in the system. The CCP was replaced by ZCPR3. The BDOS was replaced by ZRDOS. The only thing left is the basic input/output system (BIOS) which was written specifically for Heath 8-bit computers by Heath.

In this article, I will explain the features of ZRDOS and a few advanced features of ZCPR3, as well as some special considerations which arose while implementing Z-System on Heath computers.

ZRDOS

ZRDOS is fully compatible with the ZCPR3 command processor, ZCPR3 features and utilities. It is also fully compatible with CP/M's BDOS, but it does a few things differently to enhance system performance.

Differences Between BDOS And ZRDOS

The bdos err is DEAD! ZRDOS permits disk swapping without requiring a control-C to warm boot. ZRDOS automatically logs-in a new disk after it was changed. There are, however, two special circumstances which require special discussion. ZRDOS will normally handle a disk swap and perform the warm boot as required. But if a file was open at the time you did the swap and an attempt is made to write to the file on the swapped disk, you will see the error:

```
ZRDOS Error 5 on B:
```

There are a total of six ZRDOS Error messages which are explained later.

The second special situation involves swapping a disk with one of a different density or number of sides. ZRDOS can not cope with this because it is not the responsibility of ZRDOS to adjust itself to disks of different densities or number of sides. This function is performed by the BIOS. On warm boot, the BIOS determines the density and number of sides of the disk. So, in the case of disk swapping, unless the swapped disk is of the same density and number of sides, a control-C will always be required. Under CP/M, a drive may be made read-only using the STAT utility. However, this R/O status is lost after a warm boot. Under ZRDOS, the drives R/O status is remembered after warm boots for improved file security. System calls which reset the disks will reset the log-in vector, but will not change the drive's R/O status.

In ZRDOS, a change was made involving the Read Console Buffer. The Delete key is now always treated the same as the backspace key and the control-R (retype the command line) was not implemented since these were Teletype oriented commands. It is important to note here that Heath's CONFIGUR utility does not know that ZRDOS has replaced the CP/M BDOS. Therefore, do not alter option 'L' on the Terminal/Printer Sub-Menu of CONFIGUR which allows control of the Echo-On-Delete in the old BDOS. ZRDOS will always treat the delete key the same as the backspace key and changing option 'L' in CONFIGUR will poke an undesired byte into ZRDOS which will corrupt it and produce unpredictable results.

CP/M supported two file attributes: R/O or R/W, and DIR or SYS. ZRDOS supports two more file attributes: Archive and Wheel. The archive attribute, when set, is used to indicate that a given file has not been altered since the last time it was copied to a backup disk (the archive disk). You could set or reset the archive bit manually with a ZCPR3 utility, such as PROTECT. You could also use the public domain program NSWEEP or you could use the ZRDOS utility SFA (Set File Attributes). The real beauty of the archive bit shines when using the ZRDOS utility AC (Archive/Copy). When you use AC to archive (backup) a working disk to another disk, AC will copy only those files whose archive bit is not set. If the archive bit is not set, that means that the file has been altered since the last time it was archived. After AC copies

and verifies the file, it will set the archive bit to indicate that it was archived. Now your backup procedures will not needlessly copy all the files from disk to disk. Modern archiving procedures copy only those files which changed since the last time archiving was done.

The Wheel Byte is a feature of ZCPR3 which allows system security. Turning the wheel byte off will disable certain ZCPR3 features and utilities. Depending on how you implemented your ZCPR3 system, you could place many restrictions on the user when the wheel byte is off. He could be denied access to user areas above a certain number or drives above a certain letter, as well as being denied the privilege of erasing or renaming files.

ZRDOS takes this concept further by placing a wheel-protect attribute on a file. If the W/P file attribute is set, any attempt to change this file will result in the error message:

ZRDOS Error 6 on B:

Changing of the wheel byte is under password control using the ZCPR3 utility WHEEL.COM or the resident command WHL, if implemented in your resident command package (RCP).

ZRDOS Function Calls

ZRDOS supports all of CP/M's BDOS Function Calls. Function Calls are used by assembly language programmers to interface their programs to the operating system. In addition to the standard Function Calls, ZRDOS supports four new calls:

- Function 47: Get Current DMA address
- Function 48: Return ZRDOS Version Number
- Function 50: Set Warm Boot Trap
- Function 52: Reset Warm Boot Trap

Function 47 will return the current DMA address in HL. Function 48 would be used to test for the existence of ZRDOS by programs which require it to be present in order to utilize its features. The last two functions 50 and 52 provide a method of intercepting a warm boot and transfer control to a custom program, such as one which would print user defined error messages.

ZRDOS Error Messages

The following is a comparison of the error messages found in BDOS and ZRDOS:

ZRDOS		BDOS
Error Number	ZRDOS Meaning	Meaning
1	Read Error on A:	Bdos Err On A:Bad Sector
2	Drive Select Error on A:	Bdos Err on A:Select
3	Disk R/O Error on A:	Bdos Err on A:R/O
4	File R/O Error on A:	Bdos Err on A:File R/O
5	Disk Changed Error on A:	N/A
6	File W/P Error on A:	N/A

The error display of ZRDOS is in the form:

ZRDOS Error n on d

Where 'n' is the error number between 1 and 6 and 'd' is the drive letter on which the error occurred.

A utility is provided to expand the error message into screens of text data further describing the nature of the error.

Public

Using the "public" feature of ZRDOS, any drive from A through H and any user area from 1 through 8 can be designated public. Any files which are now placed in a public area are accessible

from any other drive or user area on the system. This means that you can place commercial files like WordStar or dBASE-II in a public area, and those programs can be run while you are logged into a different drive and user area. The programs will have no trouble finding their overlays in the public area, and they will run as though they are in the current user area. This allows tremendous flexibility in organizing your files on your working disks.

Re-Entrance

This feature is used to permit assembly language programs to access the ZRDOS system calls in between the times that another program was using them without disturbing the other program's operation. It is as though your assembly language program is temporarily 'stealing' ZRDOS for a minute, but doing so in an orderly fashion so that the other program does not lose its place (pointers and parameters) during its own ZRDOS system call. The main reason why re-entrance is desirable is to allow greater flexibility in ZCPR3 I/O Packages. I/O Packages redirect console and printer activity to and from disk files so it is nice to do this disk accessing smoothly through ZRDOS without interfering with another program doing disk operations at the same time.

ZRDOS Utilities

The following utilities are included with ZRDOS and require ZRDOS to be present on the system in order to run:

COMP	File Compare Utility Compares two files and reports in Hex and ASCII any differences in a full screen format.
AC	Archive Copy Utility This powerful utility takes advantage of the file Archive Attribute to copy only those files to your backup disk which have changed since the last time that AC was run. Many options are available at run-time.
DFA and SFA	Display File Attributes Set File Attributes These utilities allow display and manipulation of the File Attributes.
DUMP	A HEX/ASCII file dump utility.
VIEW	A file display utility which allows paging backwards and searching for strings.
PUBLIC	Used to designate public drive/user areas.
VTTYPE	A full screen, bi-directional file display utility which uses the ZCPR3 environment (TCAP) to determine the characteristics of your video terminal. It allows for string searches and displays a command menu.
DOSERR	This utility is used when the user receives a ZRDOS error. ZRDOS prints an error number. By invoking DOSERR followed by the error number, you will get a full explanation of the particular ZRDOS error.

Installation Of ZRDOS

Installation of ZRDOS is not very difficult. If you purchase the auto-install version of Z-System, everything is taken care of for you. If you purchase the manual install version, installation is still simple. ZRDOS will have to be installed after ZCPR3 has been installed. On the ZRDOS disk is a utility (ZRDINS.COM or some

similar name) which will relocate the ZRDOS binary image to its running address for your system and create a file containing the new ZRDOS. The utility obtains the old BDOS running address and location of the Wheel Byte from the SYS.ENV ZCPR3 environment descriptor. If it can't find SYS.ENV, it will prompt you to manually enter these addresses. The installation utility will then create the ZRDOS binary image (ZRDOS.BIN or some similar name). You will next run SYSGEN to copy the ZCPR3/BDOS from the system tracks into memory. Then you will **SAVE 38 CPM.SYS** to transfer the ZCPR3/BDOS from memory to a new disk file. Now you need DDT to overlay the new ZRDOS over the old BDOS. Here is a sample command dialog:

```
DDT CPM.SYS<cr>      (have DDT load CPM.SYS)
IZRDOS.BIN<cr>      (define the next file to read)
R1080<cr>           (read the new file with an offset)
^C

SAVE 38 Z.SYS        (save the changes to a new file)

SYSGEN Z.SYS         (place the new file on the system
                    tracks)
```

A very important note about that offset 1080 regarding Heath systems: This offset is the standard offset for DDT to find the start of the BDOS. It is actually one page (100H or 256 bytes) less in value than the actual address of the BDOS in the SYSGEN image (CPM.SYS). This means that you will find the start of the BDOS at 1180H in a standard CPM SYSGEN image. On Heath systems, you will find the BDOS there if you booted your system from an H-17 hard sector drive. However, if you booted from an H-37 soft sector drive, the locations of the CCP and BDOS (as well as ZCPR3 and ZRDOS) will be 80H or 128 bytes higher in the SYSGEN image. Therefore, on an H-37 system, you will find ZCPR3 at 0A00H and ZRDOS at 1200H. So, if you are installing ZRDOS on an H-37 drive, you will use 1100 as the offset value instead of 1080.

Other Notes Regarding Z-System Running On Heath Z-80 Computers

The CONFIGUR utility may crash Z-System unless certain precautions are taken. As mentioned before, do not change the option of echo-on-delete on the Terminal/Printer options menu if ZRDOS is installed. ZRDOS always treats the delete key the same as the backspace key and changing this option with CONFIGUR will corrupt ZRDOS.

The other option which will surely crash Z-System (ZCPR3 in particular) is messing with menu screen D which allows set-up of automatic command lines on cold or warm boots. With the standard CP/M CCP, you could run a program automatically on cold or warm boot by placing the file name directly into the CCP at a known address and passing control to the CCP. Under ZCPR3, you could do the same thing, but the method is vastly different. The recommended ZCPR3 configuration calls for a Multiple Command Line Buffer (MCLB) external to ZCPR3. It is 200 bytes in length and stores multiple commands, separated by semicolons, up to 200 characters in length. If you wanted to automatically run a program on cold boot, you would place the file name in the MCLB. When control is passed to ZCPR3, it will execute that file. When ZCPR3 was installed, the BIOS was modified to insert the filename STARTUP.COM into the MCLB. This means that STARTUP.COM will be run every time the system is booted (if it can be found on the disk). To make matters more complex, STARTUP.COM is usually an ALIAS. It was created with the ALIAS utility and it is merely a list of other files to be executed. It is similar in operation to a submit file, except that an ALIAS looks

just like a .COM file to ZCPR3. STARTUP.COM usually will load all of the ZCPR3 support files, such as the Flow Command Package (FCP), the Resident Command Package (FCP), the Environment Descriptor (ENV), Named Directories (NDR) and any other desired .COM file or terminal/printer initialization sequences.

Getting back to the original problem of crashing ZCPR3 with CONFIGUR, if you perform any changes to the D menu screen which specifies command lines to run on cold or warm boot, CONFIGUR will poke the file name into ZCPR3 instead of the MCLB where it belongs. This will corrupt ZCPR3. The only recovery is to SYSGEN the disk from your backup disk (you do have a backup, don't you?).

All other CONFIGUR screens and options will not cause a problem with Z-System. Other than the two problems mentioned, you can do no more harm to Z-System than you could have done to CP/M. You do realize that reckless use of CONFIGUR can render a disk useless in a matter of seconds regardless of the operating system used.

Looking For Available Memory For Manual Install

The following table outlines the page zero memory assignments for standard Heath CP/M 2.2. They will be the same under Z-System and you may assign unused bytes to Z-System functions. For example, I used address 3BH for the Wheel Byte. Many Z-System implementations use address 40H for the Path information. This area is used by the Heath BIOS so the Path will have to be located elsewhere (mine is at FFC0H).

Heath/Zenith CP/M 2.2 Page Zero Memory Assignments

Address	Contents	(INT)	Description

TPA And Memory Restrictions

Because ZCPR3 relies heavily on memory locations external to itself, the Transient Program Memory (TPA) is normally smaller than a standard Heath CP/M system. The TPA is that part of memory where your applications programs run. You can not take system memory and dedicate it to special functions without sacrificing somewhere else. The TPA is where the sacrifice occurs. In my H89 system running H17 and H37 disks with a full Z-System (not including I/O Package), I have approximately a 48K TPA available. Some users of certain very large applications programs will find that they run out of memory (TPA space) after changing over to Z-System. One case comes to mind regarding the Microsoft Basic Compiler and L80 Linking Loader. Under Z-System, you are limited to about a 20K COM file obtained from the Basic Compiler. Under CP/M you can obtain about 24K in a COM file. This means that if your Basic program causes the compiler to generate a COM file larger than 20K, under Z-System, you probably will run out of memory either compiling or linking the program. However, applications programs which are disk-oriented like WordStar and dBASE-II will run without any problems under Z-System since the disks are used for program data memory and the programs do not fully reside in memory all the time. They use overlays which are constantly manipulated in and out of memory.

Source For Z-System

Z-System, namely ZRDOS, is not in the public domain. The only source is Echelon, Inc. Z-System is offered in two versions. The first is a manual-install version using CP/M, MOVCPM, SYSGEN, MAC, and DDT. The second is an auto-install version called Z-COM. Echelon recommends that you not attempt the manual-install version unless you have at least two years of programming experience, especially in assembly language.

Z-COM is sold in either a single or four-disk set. The single disk is for those who already have the manual-install ZCPR3 running and now want to add auto-install capabilities to their collection. The four-disk set is a complete auto-install Z-COM system and includes over seventy utility files in object form.

The single disk for those who already have ZCPR3 running is priced at \$69.95. It will enable you to use your manual-install ZCPR3 files to create a full auto-install Z-System. The four disk set is priced at \$119.00 and is a complete auto-install Z-System which can be implemented by a novice.

Echelon also offers a complete line of development tools and applications, such as a relocating macro assembler, disassembler, debuggers, disk cataloging program, modem communications program and remote bulletin board program which all utilize the power of Z-System. Echelon also publishes a newsletter called Z-NEWS. This newsletter provides timely information for Z-System users from novice to expert. Since Digital Research all but totally abandoned support of their existing 8 bit products and discontinued development of new 8 bit programs, you would be foolish not to turn to Echelon for high-tech 8 bit products to keep your Z-80 humming. You may think that I own stock in Echelon the way I carry on about them. Actually, I am

only one of their customers. However, Echelon is one of the few companies where you feel that you are important to them. You sense that they are excited about and believe strongly in the quality of their products. They support their customers more like personal friends. You can tell that they like what they are doing. Echelon is 'number one' in my book.

For more information and a current price list, contact:

Echelon, Inc.
101 First Street
Los Altos, CA 94022
(415) 948-3820

Z-NODE Central BBS: (415)-489-9005
300/1200/2400 baud

There are a number of Z-NODE remote access systems from coast-to-coast. They all support and maintain the latest ZCPR3 upgrades as well as provide Z-System question and answer sessions. Write to Echelon for a list of Z-NODE systems.

Z-System And Further Reading

I know that all this Z-System stuff sounds complex and I am sure that writing about it without the reader having hands-on experience does not do it justice. I only hope I have created an interest in Z-System so that you will seek it out and begin to learn about it. The system is vast in many ways. It has raw power itself. ZCPR3 source code is available so it has the power to teach you. It is almost impossible to exhaust its potential. You do need to put forth some effort yourself. Here are a few books and articles about ZCPR3 and ZRDOS.

Conn, Richard. *'ZCPR3 - The Manual'*, New York Zoetrope, 1985, 351 pages. This book was written by the creator of ZCPR3. This is the 'bible' of ZCPR3 and accompanies the many on-line help files which come with ZCPR3. Available for \$19.95 from Echelon, Inc.

Conn, Richard. *'ZCPR3 and I/O's'* Echelon, Inc, 1985, 50 loose-leaf page booklet. It details the implementation of I/O packages and how to modify your BIOS to include I/O redirection. Available for \$9.95 from Echelon, Inc.

Swenton, Rick. *'Upgrade Your CP/M 2.2 With ZCPR3, A Z80-Based Command Processor'*, REMark, November 1985.

Allen, Richard. *'Installation of ZCPR3 For Heath Computers'*, REMark, November 1985.

Conn, Richard. *'Inside ZCPR3'*, Micro Cornucopia, October-November 1985.

Conn, Richard. *'The Evolution of ZCPR, Part 1'*, Computer Language, October 1984.

Conn, Richard. *'The Evolution of ZCPR, Part 2'*, Computer Language, November 1984.

Now I Can Run 'FLIGHT SIMULATOR'!!

Jim Buszkiewicz
HUG Software Developer

I'm not sure if that's sufficient reason to make one's H/Z-100 PC compatible, but if you are looking for 'as close as possible' PC compatibility, UCI's EasyPC is the way to go. Almost a complete microcomputer system in itself, the EasyPC consists of three circuit boards: two S-100, and one 'system' board. Also included in the package was a wiring harness, a small speaker, and most important, a detailed installation manual.

Once your H/Z-100 is disassembled, and seven ICs removed from the motherboard, installing the EasyPC is quite simple, and the only tricky part is seating the 'system' board into those seven empty IC sockets on the H/Z-100 motherboard. Three of the ICs removed from the H/Z-100 motherboard are used on the EasyPC system board before it's installed. The remaining four are no longer used. The next two boards installed are the EasyPC video master and floppy controller boards into S-100 slots 2 and 1, respectively. Using the supplied wiring harness, the original video board output now goes to the EasyPC video master, and the video master's output gets routed to the back panel connectors. After the drives are reconnected to the floppy controller, the computer can then be reassembled.

Upon power up, the EasyPC system is in control and allows you to select between <I>BM or <Z>enith mode. If you choose <Z>, the system 'hand' prompt will appear, and the H/Z-100 will operate as if nothing was ever done to it. If <I> is selected, the UCI prompt will appear, and await your command to boot a disk. No other commands are available from the UCI prompt. When the boot command is given from the keyboard, the EasyPC tries to first boot the Winchester. If one doesn't exist, or the proper partition isn't found, it then goes to floppy drive A:

Compatibility appears to be almost complete! All of the games (oops, I meant application software) I have, run without problems including, yes, even Flight Simulator! The success of this emulator is mostly due to the fact that it consists of almost an

entire PC in itself. When it's installed in an H/Z-100, it's like having two different computers inside of one cabinet, and which one you use depends on whether you type the <I> or <Z> at turn on. Most programs operate somewhat faster on the EasyPC than on the H/Z-150. This may be because the H/Z-100 I'm using is running at 8 mhz (the EasyPC runs on either 5 or 8 mhz), or it may be the way the hardware is implemented. Since sound is supported, game playing (something most of us NEVER do with a computer) is more fun also. With the proper cable and monitor, all 16 colors can be displayed. Due to the 'dual' controller chip floppy disk controller board, you'll find that even 'copy protected' software will boot and execute properly, as well as copy properly (using the various copy protect override programs)!

I have noted some minor drawbacks in using the EasyPC emulator. Because of the positioning of the EasyPC system board, the PC-240 ZCLK will no longer fit. It might be possible to use a small 40 pin extender cable so it can be reinstalled. The Z-216 numeric co-processor must also be eliminated from the system due to space limitations. If you're using an RGB monitor other than those manufactured by Heath/Zenith, you may run into a sync signal compatibility problem. This occurs only in the <I>BM mode because the EasyPC generates its own video signals and they are not selectable on the EasyPC video master as they are on the H/Z-100 video board.

The current price of the UCI EasyPC Emulator is \$699. Besides that cost, however, you will have to purchase the PC version of the MSDOS operating system. Presently, Heath is offering this software for \$90 (regularly \$150) with the purchase of the UCI Emulator.

I feel that if you want to keep the superior capabilities of your H/Z-100 and still come as close as possible to emulating an IBM PC (without actually buying one), then the UCI EasyPC Emulator is the only choice. ✱

S & K Technology Inc.

Quality Software for Heath/Zenith Microcomputers

WatchWord™ for the Z100

The ultimate in word processing with speed and power. See the reviews in Remark (Jul 1985) and Sextant (Jan-Feb 1985; Sep-Oct 1985). Requires 192K RAM.

Price: \$100
Demo Disk: \$ 3
(Includes the Resident Speller Demo.)

The Resident Speller™ for the Z100

A spelling checker for use with WatchWord. Check your spelling as you enter text from WatchWord. Includes a stand-alone spelling checker for ASCII files.

50,000 word expandable dictionary, requires 192K RAM (300K for use with WatchWord).

Price: \$100

(Demo Included on WatchWord Demo Disk.)

The Resident Speller™ PC Version for the Z150

Check your spelling as you type from most word processors.

Includes a stand-alone spelling checker for ASCII files.

50,000 word expandable dictionary. Requires 90K in addition to memory required by your word processor.

Price: \$99
Demo Disk: \$ 2

Texas Residents add state sales tax.

S & K Technology, Inc., 4610 Spotted Oak Woods, San Antonio, TX 78249, (512) 492-3384

HEATH/ZENITH 88, 89, 90 PERIPHERALS

16K RAM EXPANSION CARD

Expand your H/Z 88, 89 RAM Memory to a **FULL 64K** and begin using larger and more powerful programs with our **16K RAM** card.

Fully compatible with: Magnolia Microsystems and CDR CP/M and disk I/O interface cards

Featuring: Complete installation instructions • Mounting bracket • 90 day warranty

Field reliability record exceeding 3 years

Only \$65.00
Shipping & Handling \$5.00

2 PORT SERIAL CARD I/O 3 PORT PARALLEL

... not your typical vanilla flavored serial and parallel interface. ...

Your H/Z 88, 89, 90 can now directly connect and operate EPSON, IDS, ANADIX, GEMINI, SILVER REED, NEC, SUPER 5, PROWRITER, OKIDATA, and many more line printers using CENTRONICS style parallel interface with our 2/3rds, 2 port serial, 3 port parallel interface card. Or you may use all 24 digital lines in various configurations of input, output, or bidirectional modes for industrial control or data sampling.

Features:

- 2 Serial Ports Supporting Ring Input, and External Clock • 3 Parallel Ports, 24 Total Digital Input/Output Lines • Fully Compatible with All Models of H/Z 88, 89, 90 using Heath/Zenith CP/M or HDOS • Now Supporting CP/M Version 2.2.04 • Choice of Centronics Line Printer Support Software for the CP/M or HDOS Operating Systems • Reduced Computer Bus Loading and Chip Independent Design

Complete with Installation Instructions, Documentation, 90 Day Warranty, Two Serial Cables and a Parallel Cable Internal to the Computer

Price \$199.00 **Second Operating System Driver \$25.00**
Shipping & Handling \$10.00

REAL TIME CLOCK

You will be able to perform time and date stamping for point of sales software, and bulletin board software or perform time studies as well as real time data sampling with our **REAL TIME CLOCK**. This peripheral card is a perfect companion to our 2/3rds card for industrial control and data sampling. **STOP WATCH** time study and alarm demonstration software is included for the CP/M operating systems. You will be able to view the current date and time on screen continuously or simply listen to an audible beep every fifteen minutes and the hour chimed or disable the clock entirely at your option.

Features:

- True I/O Addressing, Not Memory Mapped • User Selectable Address • Rechargeable Battery Backup Using Commonly Available Batteries • Installable on the Left or Right Side of the Computer (Left side operation requires our I/O expansion module) • Month, Day, Year, Hour, Minutes, Seconds, 1/10's, 1/100's and 1/1000's of Second of Accuracy • Interrupt Capability Based on Tenths of Seconds, Seconds, Minutes, Hour, Day, Week or a Specific Date and time • CP/M Operating System Software Driver and Demonstration Programs • HDOS is not Supported

Price \$130.00 with Batteries
Shipping & Handling \$5.00

\$114.00 without Batteries

First Capitol Delivers Zenith. Your Way.

Have it your way.

If you're looking for a PC, you couldn't do better than Zenith. And you couldn't buy your Zenith at a better place than First Capitol. We'll put together a system the way YOU want it. And we'll do it for a price that competes with the guy who just sells boxes that fall on his loading dock.

Great Prices. And A Great Machine.

We're committed to Zenith. And to you. the standard Zenith models that come from the factory are a good buy. And we'll be glad to sell you one at a price that will match anyone. But if you want the full potential, we'll fix it up for you. Larger disk drives. More memory. Internal tape back up. Removable winchesters. All at a budget pleasing price.

We make Zenith Scream.

When a new model comes out, we're among the first to get it. Our Zenith fanatics take it apart, prod it and poke it until it screams for mercy. Then we put it back together (usually with some new parts) so that it REALLY screams. With power.

You'll be back.

Check with us. Check elsewhere. We'll put together a custom quotation for you we GUARANTEE you'll find interesting. We think you'll come back to us. There's a reason for the growing list of companies, government agencies, and end users that know us as the source for Zenith. Your Way.

**HUG P/N 885-3034-37 MS-DOS
ZPC Support Disk \$10.00**

Introduction: The ZPC Support Disk contains files to help you make better use of the HUG Z-100 PC Emulator (HUG p/n 885-3030-37). This disk contains patches to update early releases of ZPC itself, patches for several popular software packages that enable them to run under ZPC, and an emulator for the ANSI.SYS device driver supplied with the Z-100 PC version of MS-DOS.

Requirements: To use this disk, you need ZPC itself, and an H/Z-100 (not PC) computer and MS-DOS version 2 or 3. All of the programs for which patches are supplied write directly to video memory when they are run on a real PC, which means that you need 768k of memory in your H/Z-100 to run them under ZPC.

Program Author: Patrick Swayne, HUG Software Engineer

Disk Content: The files on this disk are divided into three sections. The first section contains patches for ZPC itself. The
Continued on Page 99

TABLE C
Product Rating

- 10 - Very Good
- 9 - Good
- 8 - Average

Rating values 8-10 are based on the ease of use, the programming technique used, and the efficiency of the product.

- 7 - Has hardware limitations (memory, disk storage, etc.)
- 6 - Requires special programming technique
- 5 - Requires additional or special hardware
- 4 - Requires a printer
- 3 - Uses the Special Function Keys (f1, f2, f3, etc.)
- 2 - Program runs in *Real Time**
- 1 - Single-keystroke input
- 0 - Uses the H19 (H/Z89) escape codes (graphics, reverse video)

Real Time — a program that does not require interactivity with the user. This term usually refers to games that continue to execute with or without the input of the player, e.g. p/n 885-1103 or 885-1211[-37] SEA BATTLE.

ORDERING INFORMATION

For Visa and MasterCard phone orders; telephone Heath Company Parts Department at (616) 982-3571. Have the part number(s), descriptions, and quantity ready for quick processing. By mail; send order, plus 10% postage and handling (\$1.00 minimum charge, up to a maximum of \$5.00. UPS is \$1.75 minimum -- no maximum on UPS. UPS Blue Label is \$4.00 minimum.), to Heath Company Parts Department, Hilltop Road, St. Joseph, MI 49085. Visa and MasterCard require minimum \$10.00 order.

Any questions or problems regarding HUG software or REMark magazine should be directed to HUG at (616) 982-3463. REMEMBER—Heath Company Parts Department is NOT capable of answering questions regarding software or REMark.

NOTE

The [-37] means the product is available in hard-sector or soft-sector. Remember, when ordering the soft-sectored format, you must include the "-37" after the part number; e.g. 885-1223-37.

FOR YOUR EYES ONLY

**Code Name: "Rambo"
Real Name:
"Turbo Lightning™"**

User Groups find out Borland's secrets first, because you were the first to buy Borland products — and we'll never forget that. So we're telling you about Turbo Lightning before anyone else knows. (There isn't room here for the whole story, but you can read a fuller account in the COMDEX issue of PC Magazine).

We've had an astonishing product, code-named 'Rambo' under secret development for several months. Based on electronic versions of the Random House® Dictionary and the Random House Thesaurus, our new Turbo Lightning is the most amazing on-line information system since your brain.

It checks your spelling — as you type — and while you're running another program. More than that, it offers instant access to synonyms — and is intelligent enough to learn from you. In fact, the more you use Turbo Lightning, the smarter it gets.

Turbo Lightning is the 'engine' that powers what is also being announced on this page, the Turbo Lightning Library™. Soon-to-be-released volumes will include extended thesauruses, specialized dictionaries and other forms of electronic information.

Public announcement of Turbo Lightning will quickly follow this private announcement and we'll be shipping by November 15.

**Reflex™
comes in
from the cold.**

Some of you already know how good Reflex is. You know that it looks at data and numbers in a whole new way. A way that turns a 1-2-3 into a graphic 4-5-6 because it shows you relationships and interrelationships that were hidden in data inside 1-2-3®, dBASE®, PFS File® or any of that crowd.

With Reflex, when you look, you see. It offers you five different 'Views.' 'Form View' to build your database; 'List View' to list data in tabular form; 'Graph View' for instant graphics; 'Cross-Tab View' for instant cross-referenced relationships and 'Report View' that imports data from Reflex, 1-2-3, dBASE and PFS File than prints it in the format you want. On top of that, 'Report View' is a better report generator than 1-2-3 ever had — and at \$99.95 for all five 'views,' Reflex is also the cheapest. (When we acquired Analytica Corporation, original developers of Reflex, we changed the name to "Reflex: The Analyst" and cut the price from \$495.00 to \$99.95). A very impressive product and we think, the greatest analytical tool since the couch.

So let's talk. 800-line Ordering Service: 800-255-8008 (outside CA), 800-742-1133 (inside CA), 6a.m. to 9p.m. Mon/Fri; 8a.m. to 5p.m. weekends; the former "Ma Bell" (408) 438-8400, ask for the Sales Department; MCI MAIL: BORLAND; CompuServe: GO BOR; Telex: 172373. And if you insist on the quill, 4585 Scotts Valley Drive, Scotts Valley, CA 95066. And thanks for your continuing support.

BORLAND
INTERNATIONAL

Lotus 1-2-3 is a registered trademark of Lotus Development Corporation. dBASE is a registered trademark of Ashton-Tate. PFS File is a registered trademark of Software Publishing Corp. Reflex is a trademark of BORLAND/Analytica Inc. Turbo Lightning and Turbo Lightning Library are trademarks of Borland International Inc. Random House is a registered trademark of Random House Inc. And our use of the code-name Rambo has nothing to do with the movie.

Discover What 10 Software Insiders Already Know!

1. "... a little company that has succeeded over the last five years in giving its customers a lot of value for their money ..." — Richard O'Reilly, computer columnist
2. "All the firm's programs are graced with features that the entire industry should be required to provide. Their manuals are the most honest in the industry." — T.R. Reid, syndicated computer columnist
3. "... the two most important attributes of Software Toolworks' programs: they're priced low, and they work well." — The Washington Post
4. "Unlike the software of many publishers these days, none of The Software Toolworks programs are hobbled by copy protection, nor does the company try to tie up its customers with mumbo-jumbo licensing-agreements ..." — The Los Angeles Times "Computer File"
5. "I don't know how The Software Toolworks stays in business charging such low prices for such nifty products ..." — David Gerrold, computer columnist and noted science fiction author
6. The Software Toolworks C/80 compiler is "... the best software buy in America ..." — Microsystems
7. "It would be the best of all possible worlds if some magic diskette could be made that would transform any hardware in such a way as to receive The Software Toolworks' numinous software." — Wm. F. Buckley, Jr.
8. "The Software Toolworks has a whole raft of programs that work, and (the company) sells them for reasonable prices. I strongly recommend that you get their catalog." — Dr. Jerry Pournelle, computer columnist "Byte" and noted science fiction author
9. "One of the original pioneers in low cost, high quality software, The Software Toolworks publishes over 50 solid products in MS-DOS and CP/M for under \$60." — Walt Bilofsky, chairman of The Software Toolworks
10. "All products are shipped within 24 hours, come with a money back guarantee, and free technical support is available (though you'll hardly need it)." — Joseph Abrams, president of The Software Toolworks

Media Master Plus — Now you can run most CP/M programs on your IBM PC or compatible without additional hardware. Media Master™ lets you read, write and format over 70 different double density CP/M formats. ZP/EM™ (included) emulates an 8080 processor to execute CP/M software at machine language level giving you the equivalent of a 1 MHz 8-bit computer. Also includes terminal emulation for Osborne, Kaypro, Health/Zenith and DEC VT52 displays. Requires 192K RAM. For IBM PC and compatibles. — \$59.95

14478 Glorietta Drive, Sherman Oaks, CA 91423

U.S. and Canada add \$2.00 per order s/h. Overseas orders add \$5.00 per order. CA residents add 6.5% sales tax. Orders shipped UPS. Dealer inquiries invited.

Mychess — Award-winning world class chess program, featuring nine skill levels and over 850 opening moves. Prints moves and saves games in progress. Outstanding graphics display board on IBM PC and most popular CP/M computers. — \$34.95

Toolworks C — Full featured C compiler and run time library. One of the fastest on the market! New MS-DOS version produces relocatable object files (.obj). MATHPAK provides true 32-bit floating point and signed integer data types. CP/M and MS-DOS. Toolworks C Compiler — \$49.95
Toolworks C Mathpak — \$29.95

Airport — You are an air traffic controller with radar screen filled with aircraft under your guidance. See how long you can last without cracking. Tougher than the real thing! CP/M and MS-DOS. — \$19.95

LISP/80 — Experiment with artificial intelligence programming! Over 75 LISP functions. Includes source for an editor written in LISP and several demonstration programs. CP/M and MS-DOS. — \$39.95

Using An MS-DOS Device Driver To Implement A Hard Disk

Jim O'Connor
421 Moonlight Tr.
Lewisburg, TN 37091

Any computer owner who has sat with itchy finger, waiting for those two blinking floppy LED's to signal the end of another assembler iteration has dreamt of the day he will add a disk to his system.

There are a number of ways to add a hard disk to the Z-100 computer. Zenith Data Systems provides a turnkey system, as do a number of other computer dealers. If you are brave and good at assembly language (itchy finger time!), you can piece a system together and rewrite the Z-100 BIOS. The third method, and the subject of this article, is to use the MS-DOS device driver option and create your own system. Those of you still using ZDOS 1.XX are out of luck, since device drivers aren't supported. But fear not, MS-DOS 2.XX is available for the Z-100 and it does support device drivers.

The device driver solution described in this article is not meant as a direct replacement to the turnkey system. Instead, it is intended as an exercise in the use of device drivers. It has some inherent drawbacks. Because the driver is written for MS-DOS, it will not work with CPM. The MS-DOS operating system cannot be booted from the hard disk since the hard disk driver is installed from a floppy drive. And finally, the MS-DOS programs for Winchester drives are not applicable, since they were written for the Z-217 controller board.

The device driver solution has one advantage most computer hobbyists can identify with. It provides the hard disk speed and large storage size at a lower cost (\$735 vs. \$999 for 10Mb of disk storage) of the turnkey system. If you spend a lot of time with the MS-DOS operating system and need the advantages of a hard disk drive, READ ON!!

Device Drivers

Very little information regarding device drivers is given in the Zenith MS-DOS manual, however, an entire chapter is devoted

to the subject in the Programmer's Utility Pack offered by Zenith. For those of you not already familiar with the structure of device drivers, the chapter will provide good reading. A little background information on device drivers and their uses might be helpful at this time.

The Z-100 computer, as purchased, already contains a number of device drivers for interfacing to floppy disk drives, printers (parallel and serial), the keyboard used to type this article and various other hardware interfaces. These drivers are contained in the BIOS software and are invisible to the user. But what if those ready made drivers won't interface to your hardware? That's where the device driver comes in. It provides a structured means of matching a hardware specific interface to the MS-DOS operating system. The driver is usually written in assembly language and linked into a .EXE (or .COM) file. You install the device driver in MS-DOS by placing the file on the system disk and creating another file called CONFIG.SYS which is merely an ASCII text file with the command:

```
DEVICE = Driver.EXE ( or COM)
```

where Driver is the name of the device driver. The driver is then installed at system bootup (or reset) by the MS-DOS operating system.

Device Driver Types

Device drivers come in two types: Character and Block. Character drivers handle hardware interfaces which communicate to MS-DOS in a serial manner, i.e. a character at a time. Examples of such devices are: printers, keyboards and displays. Block drivers, on the other hand, transfer data in blocks (such as a disk sector) usually containing 256 to 512 bytes. Examples of such devices are: floppy, hard or RAM disks.

Character devices are given names (up to eight characters) like CON, AUX or PRN; device names familiar to MS-DOS users. In

fact, device drivers written utilizing these names actually replace the ones in BIOS. You can replace the keyboard and display on your Z-100 by writing a custom driver which interfaces a serial port to your favorite terminal and installing it on your system disk (Don't forget to name it CON!). Since character devices have only one name, they can only support one device.

Block devices don't have names. Instead, they are designated by letters (as are the Z-100 floppy disks). Since the letters A-H are already claimed by MS-DOS, any device driver installed will start at the letter I. Block drivers can support more than one device. Thus, a driver that supports two devices will claim drive letters I and J. The next block driver installed will claim K and so on. Up to 63 block drivers can be installed, but I doubt if anyone will ever need that many! So, now that you know what a device driver is, all you need to learn is the device driver structure.

Device Driver Structures

The device driver structure is detailed in Chapter 5 of the MS-DOS Programmer's Utility Pack. If you want a deep understanding of how the structure is utilized, I suggest you purchase that item and read it for yourself. If not, the brief discussion that follows will suffice.

Device Header

Every device driver includes a special header which identifies the file as a device driver (those MS-DOS guys think of everything). The device header defines the entry points for the two main routines contained in the driver: strategy routine and interrupt routine. In addition, the header contains various attributes of the device such as: character or block, name or number of devices supported, special attributes and a pointer to the next device header.

Strategy Routine

The Strategy Routine is called by MS-DOS with a pointer (ES:BX) to a request block which contains information concerning the function the driver is to perform. The format of the request block is determined by the function to be performed. In most cases, the Strategy Routine retrieves this pointer and stores it for use by the Interrupt Routine.

Interrupt Routine

The Interrupt Routine is responsible for completing the function requested by the Strategy Routine. The request block pointed to by that routine contains the function number, the data transfer address, the number of bytes to transfer and other pertinent information. The Interrupt Routine is also responsible for returning status information back to MS-DOS on the success of carrying out the requested command. There are 13 functions available, 11 of which are utilized by character drivers and 8 of which are utilized by block drivers (Chapter 5 of the Programmer's Pack goes over these functions in great detail).

The Hard Disk Solution

A complete hard disk system for the Z-100 will consist of an S-100 controller board, a winchester disk drive, the interconnecting cables and a custom device driver. Also, since this device is unknown to the MS-DOS system and cannot be initialized with the FORMAT program, a special format program must be written.

Choosing a controller board for the hard disk system involved two criterion: price and performance. The winner: the DGC-100 single board controller by KONAN. It provides all the

basic functions, as well as some helpful additions; Error correction, software selectable sector interleaving, automatic retries upon error detection and automatic replacement of bad tracks during the format command. All this plus ST-506 compatibility at a reasonable price (\$335 including shipping). No modification of the controller was necessary. I placed the DGC-100 in the second S-100 slot.

Choosing a winchester disk drive was a bit more complicated. In addition to price and performance criterion, compatibility with the Z-100 power supply must be considered. Hard disk drives can require large +12V currents at startup, and in general use more power than floppy drives. It was necessary, therefore, to choose a hard drive that most closely represented a floppy disk drive. The winner: the HH-612 10 MB 5.25" Half-Height from Microscience International Corp. It requires a mere 10 Watts of Z-100 power! I purchased the drive as part of an upgrade for an IBM PC (hard drive, controller and cables) and subsequently sold the controller board to a colleague. The drive and cables cost \$400. I removed both drives from the Z-100 and then placed the A: drive in the lower slot. I removed the termination network from the B: drive and installed it on the A: drive. If this sounds confusing, consult your Z-100 Technical Manual. It has pictures of what I've just described. I then installed the HH-612 hard drive in the upper slot, plugged in the floppy power connector and made the necessary interconnections to the DGC-100 controller. The hardware was ready.

The Software

Listing 1 is the completed device driver. The listing is well commented and should be easy to follow. I've included the section of the DGC-100 manual which explains the host interface. Pay close

attention to the SET__PARMS subroutine in the listing. Note the first 64 sectors on the disk are accessed without moving the heads (sectors 0 through 15 under head 0, sectors 16 through 31 under head 1, etc.). The next 64 sectors are accessed by moving the head forward one step. This method should prove more efficient (in terms of head steps) than, say, placing the sectors sequentially on a given disk surface. After entering the code with your favorite text editor, assemble the device driver as follows:

```
MASM hdisk, hdisk, hdisk, nul,
LINK hdisk, hdisk, hdisk, nul;
EXE2BIN hdisk.exe hdisk.com
```

Ignore the Stack warning error from the LINKer.

The device driver is made available to MS-DOS by placing the following statements in the CONFIG.SYS file on your boot disk (or creating one if none exists):

```
BUFFERS=10 (extra disk buffers)
DEVICE=hdisk.com /10 (or /20)
```

The driver is then loaded at power up or whenever the Z-100 is reset. If you inspect the DEVICE= line in the file as written, you will see the two switches, /10 and /20. Referring to the driver code in Listing 1, I have added the option to also use the Microscience HH-725 20MB hard drive. It has nearly identical specifications as the HH-612 and should be easily implemented.

Listing 2 is the special format program FHDISK. The program was written and compiled in TURBO Pascal. The program is executed by simply issuing the command

```
FHDISK /10 (or /20)
```

at the DOS command prompt. The program then formats the hard drive (it takes about 10 minutes for the HH-612 drive) and

```

maps any bad sectors to the last physical sector on the drive. After formatting the drive, the program initializes a boot sector, two FAT's and a directory. This program is only run when the hard disk is first installed (or when the urge to format strikes again).

Observations

In an effort to convince myself that all the time I spent creating the device driver and format program wasn't wasted, I attempted a simple benchmark. Using the DOS TIME function, I recorded the time it took to assemble (with listfile), link and convert to a .COM file the device driver of Listing 1. Using a two floppy system (MASM, LINK and EXE2BIN on one disk — source files on the other) it took 3 minutes 20:44 seconds. Using the HH-612 hard drive (all files in the same directory), it took 1 minute 40:54 seconds. Half the time!

Due to limits in my budget (I'm sure you can relate), I did not try an actual HH-725 hard drive. The possibility of a bug in the 20MB

sections of the device driver and FHDISK exists, however, I have taken care to check at the code level to limit that possibility.

The use of a device driver to interface a hard drive to the Z-100 has also opened another option for speeding disk access. The RAM limit on the Z-100 is 768K of which 64k could be set aside for catching purposes. Ahhh, but that's a subject for another time!

H-89 SPEED MOD Software selected 2/4 MHz operation. No trace cuts. Z80A included. \$34.95
PAYCHECK Payroll with multiple wages, salaries and tips. Prints checks, quarter and annual reports. For Z-150, Z-100, H-89. \$59.95
PERFECT PRINTER Typewriter software with immediate and buffered modes plus special functions like **BOLD** face and pitch. \$19.95

Prices included shipping. Checks, VISA, MC accepted

MICRONICS TECHNOLOGY 904-897-4257
 449 Barbados Way, Niceville, FL 32578

BANNER PROGRAM

\$19.95

Our new BANNER program can print sideways banners in a variety of type styles and sizes. Program is compatible with our "CALLIGRAPHY" library of over 20 type styles. Operates with EPSON, GEMINI, and MPI printers. Uses CP/M on H89 or CP/M-85 on Z100. Program plus 2 font styles is 19.95. Additional font sets can be purchased separately.

H89 Screen Dump

\$24.95

The screen display of your H89 can be printed on your EPSON, GEMINI or MPI printer. Print text, graphics and reverse video modes from existing screens or use the "draw" mode to create screens. Operates under CP/M.

Other Products

EPSON FX character downloader 19.95

EPSON compatible graphics/Near Letter Quality enhancement module for OKIDATA 82A and 83A printers from Rainbow Technologies, Inc. 99.00

CALLIGRAPHY II for EPSON & GEMINI or MPI (Includes FONTEEDIT, GRAPHICS/TEXT FORMATTER and FONT SET # 1.) 69.00

FONT SETS 2, 3, 4 for CALLIGRAPHY and BANNER 19.95 each
 This entire ad printed on enhanced 82A with CALLIGRAPHY II and reduced to 50% of original size for publication.

Anatomy Of Altchar.Sys

Steven Howard
8300 115th Street So.
Cottage Grove, MN 55016

I have a confession to make. I love my Z-100 and believe it is one of the best computer values on the market today. But I have to say one thing for the IBM Personal Computer. I prefer its type font with serifs and easy-to-read characters.

This bothered me for quite a while. Then I heard people talking about the 'software-definable character set' and 'keyboard mapping' and became curious. I thought if these features were in existence, I could change the way my Z-100 screen looked.

One day I bought Lotus 1-2-3 and there was the IBM type font! Now I KNEW it was possible. But I still did not understand how I could change those characters into a form I could use in the rest of my software. The users manual which came with the Z-100 didn't really explain how to change fonts. It just sort of hinted at the fact that it was possible to do all the fancy sort of things I wanted to do. But I still didn't know how!

Background

Ever since cathode-ray-tubes (CRTs) replaced hex keypads on computers, the characters used on computer screens were normally the plain English characters we use in day-to-day writing and reading. These were the same characters as could be found on any typewriter. But as time went on, people began to demand more from their terminals. Many people wanted to know why they couldn't use special characters, such as math or foreign-language characters.

In the past, the characters generated on the screen were taken from an area of memory where a description of how the characters look was stored on a chip called a read-only memory (ROM). These chips worked just great, but they had one problem — the computer could only use what was already put in the chip; it could not allow changes or modifications to be made. This was the problem with custom character sets. They had to be put in a chip; and if you wanted to use it, you had to physically change the chips in the computer. Inconvenient, to say the least.

The New Day Dawns

One of the most fascinating powers of the Z-100 is the ability to change the character set through software. Simply by modifying

a file on the Z-100's system disk, you can change the way a few of the characters look — or design an entirely new character set.

Being able to modify the character set through software, you can get around the problems associated with the ROM-based character sets, and gain great flexibility in the process. The math and scientific character sets are now easy to obtain.

Along with the ability to customize the character set, the Z-100 can be modified to allow typing any one of the keys on the keyboard to send the value of any one of the other keys, instead of its own. For example, an application program would be able to have both backspace and delete send the same code to a program when entered from the keyboard. Or, if you want another key (such as a function key) to be used for an ASCII escape code, it is now possible. This would make it a simple matter to create a Dvorak keyboard for the Z-100, if needed.

Where does all this magic come from? The secret of it all lies in the file called 'ALTCHAR.SYS': it should be on every bootable ZDOS disk.

The file is actually very simple to use. When the Z-100 is booted up, the internal character set in ROM (as I mentioned earlier) is used. This is called the default character set and is loaded into random-access (RAM) memory. The operating system then looks on the disk for a file called ALTCHAR.SYS. If it is found, it is loaded into memory, and the ALTCHAR table now in memory is used to modify the default character tables already stored in memory. This modified character set becomes the one used by the system. The tables are used until the computer is either rebooted or powered up again. Should the file not be found on the disk, the default character set from the ROM is used.

Application

When I first figured this out, I felt like, "big deal, I still don't know how I can use it." Then I did some experimenting with DDT under CP/M-85, and DEBUG under Z-DOS, and discovered how easy it is to change the tables used by the operating system. (I am assuming that anyone reading this is familiar with the operation of DDT or DEBUG, depending on which operating system you are trying to change.)

The ALTCHAR.SYS file consists of three separate sections: the keyboard mapper, the font plotter, and the display mapper. The file is identical for both CP/M-85 and ZDOS, as is the format of the ROM tables themselves. Each of the three sections has its own very distinct and special job to perform in the Altchar file.

Figure 1 is the dump of a sample ALTCHAR.SYS file using Debug. This is a sample file I will be using to explain the various features of the ALTCHAR file.

Keyboard Mapper

The keyboard mapper modifies the default keyboard layout. This will allow any key on the keyboard to be modified to act like any other key you want on the keyboard. For example, the 'HELP' key could be used to send a question mark or any other key desired to an application program. The user could then hit the 'HELP' key or the '?' and the software would only need to look for the '?'.

Another possibility would be to set up the BACKSPACE and the DELETE key to operate the same. This would prevent the problems from happening as they did under CP/M regarding backspacing without deleting. This way, whichever key you choose, it will do the same thing.

Layout

Depending on the number of keys being modified, the keyboard mapper is made up of one or more two-byte entries. The more keys being changed, the more entries in the table. For each key you want to map, there are two bytes in the table.

The keyboard mapper uses a code called a 'key code'. This is the value the computer receives when a key is struck. These are not necessarily the same as the ASCII value of the character. A description of the different key codes are shown in the back of the Z-100 Users Manual in Appendix B. The sections marked UP CODE and DOWN CODE do not apply here, however.

The first byte is the key code for the key you wish to modify. The second byte in the two-byte string is the key code for the value you want it to be mapped (changed) to. The keyboard mapper section is ended when two consecutive 0FFH bytes are found.

The first 6 bytes of our sample file make up the keyboard mapper section. The mapper is set to change the HELP key (95) to work the same as the ASCII question mark (3F). Whenever the HELP key is pressed, a question mark will be issued.

In the next two bytes, I have changed the DELETE key to operate in the same manner as the BACKSPACE key. In this instance, the 7FH is the key being mapped, the DELETE key. The next byte is 08H, which means that whenever the delete key is pressed, the computer will send 08H instead of the 7FH normally used. The two consecutive 0FFH bytes mark the end of the mapper section. If you wanted to map more keys, you would simply enter them before the two 0FFH bytes.

Font Plotter

The font plotter is the most fun and interesting section of the ALTCHAR file. This is the workhorse of the ALTCHAR file. This section allows you to design your own custom character sets or modify existing ones for display on the screen.

With this section, you can build special character sets such as mathematical, foreign-language or APL characters, or you can create just plain old special graphics — characters like diagonal arrows or any other shape you feel is missing from the standard

graphics set. The GRAPHICS.CHR file on the ZDOS or CP/M-85 distribution disk is a good example of how the font plotter section works.

The font plotter allows a new shape to be specified for any of the various characters in the default font table which has been loaded in RAM. Both the font plotter and the display mapper use a display index to help them find the proper location in the font table.

The display index is simply a method of addressing a particular character by using the 'index' as an offset for a pointer to the character table. It works by taking the value of the index and adding it to a pointer to the beginning of the font table. By using this method, it is simple to point to any particular entry in the font table.

The display index for the ASCII character is found by subtracting 32 from the value of the character. This gives the proper bias for looking the character up in the font table. This puts the first printable ASCII character (a space; value 32) at position zero, the start of the table.

A graphics character is found by taking the value of its equivalent ASCII character and adding two to it. This places the graphics characters starting at 96 following the end of the standard upper case ASCII character set. For example, 33 (21H) would be the letter 'A' (65 - 32 = 33) and 56 (38H) would be the letter 'X' (88 - 32 = 56). As for the graphics set, the large dot would be 96 (94 + 2) and the graphics down arrow would be 109 (107 + 2).

Layout

The plotter consists of groups of ten bytes defining the way the character looks. The first byte is the display index described above for the character you want to define. The next 9 bytes are the actual definition of how the character is to look. Each character you wish to define will then take up an entry of ten bytes.

In each of the 9 definition bytes, for each bit that is turned on, a pixel on the screen is turned on. For each bit that is off, the pixel on the screen is turned off. When the font plotter section detects a display index of 0FFH, the font plotter ends and the display mapper begins.

Example

The following section shows how to determine the proper font description for the letter 'g', the number 7, and the graphics diagonal bar. These characters have a decimal ASCII value of 103, 55, and the graphics equivalent of 120. These translate to table index values of 103(067h), 55(037h), and 120 (078H).

The pixels wanted off are encoded as zeros, and the pixels wanted on are encoded as ones.

```

-----
|00000000| 00 |00000000| 00 |00000001| 01
|00000000| 00 |00111110| 3E |00000011| 03
|00000000| 00 |00000010| 02 |00000110| 06
|00011110| 1E |00000100| 04 |00001100| 0C
|00100100| 24 |00001000| 08 |00011000| 18
|00111000| 38 |00010000| 10 |00110000| 30
|00011100| 1C |00010000| 10 |01100000| 60
|00100010| 22 |00010000| 10 |11000000| C0
|00011100| 1C |00000000| 00 |10000000| 80
-----

```

These values in combination with the display index, would create a font plotter with the following hex values: 67 00 00 00 1E 24 38 1C 22 1C 37 00 3E 02 04 08 10 10 10 00 78 01 03 06 0C 18 30 60 C0 80 FF.

Display Mapper

The display mapper is the section which allows you to change the relationship between the keys on the keyboard and the characters which are displayed on the screen.

For example, normally when you hit an "a" on the keyboard, an "a" shows up on the display. The display mapper modifies the default character map, which determines which characters are displayed. Now, when you hit an "a" on the keyboard, any other character you choose can show up on the screen.

You may not think this would be of much use, since it is rare that you will ever need to remap the letter 'z' for example, to appear on the screen as a letter 'Q'. You would be correct. However, the display mapper comes in very handy for mapping the H-19 graphics characters from the keyboard to the appropriate graphics characters.

The display map in the default file has all the graphics characters mapped to their equivalent ASCII character. That is why you don't get any of the graphics characters with the standard ALTCHAR.SYS file. Instead, all you get is lower case characters. To see what I mean, boot your '100 without an ALTCHAR.SYS file. Run the CONFIGUR.COM program, and when the display of the computer backpanel is shown, you will see all lower case instead of the proper graphics characters.

When you use the GRAPHICS.CHR file as your ALTCHAR file, the graphics characters are then mapped back to themselves on a one-to-one relationship and graphic characters can then be displayed.

Layout

The display mapper is placed in the file immediately following the font plotter. The format of the display mapper is just like the key mapper section with one exception. Instead of a key code being used, a display index is used.

Designing Your Own Font

To make sure you understand the three sections of the ALTCHAR.SYS file, let's go through the motions of creating the example ALTCHAR.SYS file.

The first thing we need to do is set up the keyboard mapper for the HELP (95) and "?" (3F) keys. We then need to map the DELETE (7F) key to the BACKSPACE (08) key. The following 6 bytes do that for us:

```
95 3F 7F 08 FF FF
```

The two consecutive FF bytes mark the end of the keyboard mapper section. It is important to remember that if you are not mapping the keyboard, you still put in the two FF bytes. This is necessary to tell the computer that this is the end of the keyboard mapper. If this was not done, and you started immediately with the font plotter, the system would read the font plotter as a keyboard mapper. It would be confusing to say the least.

The next thing we need to do is change the vertical bar (|) to an upward pointing arrow, and the tilde (~) to a copyright mark. Below is the result of the drawing on the graph paper.

The numbers to the right of each of the characters we have made is the hexadecimal value of each line of the character.

Now, using this information we will change the font plotter to draw these characters instead of the ones normally displayed. The data string to do all this would look like this: (hex values)

```
5C 18 5A 99 18 18 18 18 18 00 5E 3D 42 BD A1 A5 99 42 3C 00 FF
```

The 5C hex value is the display index of the ASCII vertical bar character. The next 9 bytes are the actual values which are plotted on the screen for this character. These are the values along side the figure above. 5E is the hex value of the display index for the ASCII tilde. The next 9 bytes are the bytes which are plotted on the screen for the copyright emblem. The last byte, the FF, is the terminator for the font plotter. This byte tells the system that this is the end of the font plotter section.

```
-----  
|00011000| 18 |00111100| 3D  
|01011010| 5A |01000010| 42  
|10011001| 99 |10111101| BD  
|00011000| 18 |10100001| A1  
|00011000| 18 |10100101| A5  
|00011000| 18 |10011001| 99  
|00011000| 18 |01000010| 42  
|00011000| 18 |00111100| 3C  
|00000000| 00 |00000000| 00  
-----
```

The last thing we need to do is enable the graphics diagonal bar by using the display mapper. This will allow the diagonal bar to be used on the screen. The values needed for this are:

```
78 78 FF FF
```

This simply maps the index of 78 back to the index of 78. Now whenever graphics mode is enabled, the diagonal bar can be used.

Let's see if you have been able to follow along. The sample file in Figure 1 is a complete file made up of all the features I have described. Use it as a starting point for your own file to add to, or change what I have already done.

As a recap, we have mapped the DELETE key to the BACKSPACE, and the HELP key to the QUESTION MARK. The ASCII vertical bar (|) is changed to an upward pointing arrow and the tilde (~) is changed to a copyright emblem. The last part of the file maps the graphic diagonal bar back to itself so that it can be used.

Now that you understand how the altchar file works, you should design your own font in order to fully understand the flexibility of this feature. Since the ALTCHAR.SYS file is a binary file, you will not be able to use a standard editor, such as PIE or EDLIN. One method of brute forcing the data in is to use Debug under Z-DOS or DDT under CP/M-85 and enter your own data.

To see how to make these these changes with Debug, look at Figure 2, which is a sample run of the installation using Debug under Z-DOS. Installation would be the same under CP/M-85, except you would need to use DDT.

The second way is to write your own program to do this for you, if you like to 'roll your own' as I do. For you programmers out there, all it takes is 9X9 array to carry the bit patterns and to allow you to enter your data for the font plotter.

The last way is the way to go if you are not a programmer or are in a hurry. There are several font editor programs already available that let you easily enter your new information and save it as a new altchar file.

Since I began writing this MSDOS 2.X has been released. It includes a Font editor called "FONT.EXE" appropriately enough. It will help you redefine your character sets, and remap any of the

keys on the keyboard just as I have described. However, even if you use this excellent editor, it is nice to understand what is really going on when you change your character sets.

Whichever way you choose to go, the first thing to do is to turn the computer off, sit down at a table with a pad of graph paper, and design the layout of your new characters.

You will have to decide how each character will look and which character on the keyboard it will replace. If you are mapping the keyboard, similar decisions must still be made. You must decide which key or keys you wish to map, the different values for those keys (available in the appendix of the Z-100 Users Manual), and the values you want the key or keys to be.

The operation of the ALTCHAR file is another of the many features which help to consistently make the Z-100 one of the most flexible computers on the market. It provides additional flexibility for use in specialty areas such as math, science, and languages. And most importantly, it can be done by you, the user of the computer.

ZCPR3

We are licensed by ECHELON, Inc. to distribute the Z-System for the Heath market. This includes the ZCPR3 system with supporting software utilities, the ZRDOS-plus BDOS replacement and applicable documentation. Comes already installed and includes a bootable disk ready to run.

ZCPR Gives you many features found in UNIX and MSDOS. The ZRDOS is not in the public domain and gives you automatic logon of disks. No more "BDOS ERROR ON B:" messages just because you forgot to do a ^C after changing disks.

Available for Heath BIOS 2.2.03 and .04 and for CDR BIOS. Check for availability of other BIOS configurations. Call or write for a brochure on this excellent product.

ZCPRS package - specify format \$98

4MHz mod

\$45

An easy to install plug-in module. No trace cutting or soldering. Speed may be toggled with software. Includes a replacement Z80A (4MHz). Software supports Heath CP/M 2.2.03 and 04 and CDR Systems BIOS. Call or write for support of other BIOS or HDOS. Specify disk format.

EMULATE

Allows the H89 to read/write to the following disk formats.

Actrix	Eagle II	Morrow MD	Superbrain Jr.
AMPRO	Epson QX-10	NCR DecMate 5	Televideo
Beehive Tpr	Fujitsu CP/M86	NEC PC-8001A	TRS80-1 CP/M
CDR	IBM CP/M86	Osborne 1	TRS80-3 CP/M
Cromemco	IMS 5000	Otrona	TRS80-4 CP/M
DEC VT180	Kaypro II	PMC MicroMate	Xerox 820
DEC Rainbow	Magnolia	Sanyo 1100	Zorba

Now includes 42 formats! Uses a modified version of CP/M 2.2.03 or .04 BIOS which is included with the program. Allows the use of virtual drives and reading of 40-track disks in an 80-track drive.

For H37 with Heath CP/M \$59
Check for C.D.R. and Magnolia versions.

REP3 - Automatic Repeat

Stop wasting time - make full use of the repeat function just like the Z100. Simple plug-in installation on your keyboard assembly. Hold any key down for half a second and the key begins repeating. Combine this with our 4MHz mod and make WordStar fly! Provision for a defeat switch.

Ultimate Communications Software

HyperACCESSTM

A Dramatic Step Beyond ACCESSTM*

HyperACCESS gives you tremendous power—power that lets you communicate without getting technical—power that lets you glide through applications other programs can't touch.

A New Standard for Ease of Use

A startup program sets up everything for you and a fascinating on-screen tutorial lets you try out program features in simulated use of CompuServe, MCI Mail, Easylink, and others. HyperACCESS menus are instinctively easy to use, so you can focus on your work, instead of on how to run the program.

Effortless Modem Support

Instantly call any remote system by selecting it from a menu that lets you list up to 127 systems and already lists CompuServe, The Source, MCI Mail, Easylink, and other systems (subscriptions not included). The first time you call these systems, your password and user ID are memorized, and they are entered for you automatically, thereafter.

Remarkably Flexible

HyperACCESS comes ready-to-use for the more popular applications and it lets you set and store all the details you need, to connect with main frames, minis, micros, or RS232-compatible devices that defy other programs.

Terminal Emulation

HyperACCESS emulates the most popular terminals, including DEC VT-52, VT-100, TeleVideo 900 series, IBM 3101, and H-19, to let you run programs on remote computers designed for use from terminals.

Use Your Computer's Power

From within HyperACCESS, you can use your computer's DOS commands (DIR, COPY, etc.) or run your other programs. You can even define DOS macros, so you can execute a series of DOS commands and/or programs by pressing a single key.

Use Xmodem, Kermit, or Text Transfer Methods

...to reliably send/receive files of any kind from/to any disk drive or directory in your computer, even through noisy telephone lines.

Remote Use of Your Computer

Press one key and, even when you're absent, operators of remote terminals or computers can access your computer by entering passwords you define. You can set whether each password allows a user to read or type messages, transfer files, run a given program, or use your operating system and all your programs.*

Automate Your Communications

...so you can perform, with a keystroke, steps that normally would take many keystrokes. HyperACCESS has the clearest, most comprehensive script language available, to make automating communications easy for beginners and exhilarating for experts. You can automate any part of a call, make unattended calls, or create custom functions, prompts, and menus.

For astonishing power and versatility, get HyperACCESS today!

For PC-compatibles and Z-100 computers with DOS and any modem, including 2400 baud and USR S100 modems. You can get HyperACCESS for \$149 from computer dealers or from Hilgraeve Inc. (please specify computer and add \$5 shipping).

Hilgraeve Inc.

P.O. Box 941
Monroe, MI 48161
(313) 243-0576

Z-100 Version fully supports
Gemini and EasyPC Boards

*Hilgraeve and its dealers will continue to sell ACCESS, as well.
HyperACCESS and ACCESS are trademarks of Hilgraeve Inc.

*Certain programs cannot be operated remotely.

TIMELY REPORTS, ACCURATE RECORDS, RELIABLE INFORMATION.....

Complete accounting software package, only

\$ 89⁹⁵

.....this is BASIC BUSINESS

Price is nice - and so is a long list of features - but when you choose a software package to automate your accounting, don't lose sight of the basics of good business record keeping. Basic Business is an all-in-one accounting software package consisting of General Ledger, Accounts Receivable, Accounts Payable, Payroll, Inventory Control, Sales Order Processing and Purchase Order Processing. It offers an excellent price and extensive feature list without sacrificing these basic business principles:

Full Audit Trails - to give you complete confidence in the accuracy of your data and provide crucial backup information when you need it. And double entry accounting keeps your books in balance.

Complete Integration - provides efficient processing for all your business transactions, updating all of your accounting records instantaneously. You only enter the transaction once, and all supporting modules are updated automatically.

Flexibility - Basic Business can be adapted to your way of doing business, including balance forward or open item accounts receivable, departmental or consolidated general ledger, variable aging periods and easy entry of manually written checks and voids.

Extensive Reporting - each accounting module provides complete reports, including master lists, transactions, journals, statements and forms. In addition, all data files are compatible with Ashton-Tate's dBase II and dBase III, for the ultimate in custom reporting capability.

With some accounting software, even packages costing hundreds of dollars more, you must make detailed estimates and complex calculations for the maximum number of customers, transactions, inventory items, etc., before using the system. Then, when your business grows to exceed these original estimates, you must repeat this process.

Not with Basic Business! All data files are automatically initialized when you install the system on your computer. Files can grow dynamically as your business increases and are usually limited only by the amount of disk storage space available. No need for cumbersome reformatting once you exceed your original estimates.

FORMS ARE NO PROBLEM! Basic Business uses standard forms for invoices, statements, checks, purchase orders, etc., which may be ordered with your company name, address and logo imprinted.

Basic Business is one of a family of accounting and business software packages, and has sold previously for several hundred dollars per module. It has been improved, updated and repackaged to sell at a market-busting \$89.95 for all seven modules. A Point-of-Purchase module, which controls an electronic cash drawer and allows direct entry of transactions from your sales counter is available. Also a dBase file format program is available for importing Basic Business data files into dBase II/III for custom report generation or other special uses.

SOURCE CODE AVAILABLE

Do you have a distinct accounting problem that off-the-shelf software won't handle? Special forms or statements? Don't write your own accounting system from the ground up - start with Basic Business. Call (714) 630-0446 for all the details on source code licensing.

Basic Business can go to work for you today and is available for most popular MS-DOS (IBM and compatibles) and CP/M-80 personal computers. Compare our price, features and attention to detail. There is only one choice... it's Basic Business.

Basic Business	\$89.95
Point-of-Purchase module	\$99.95
dBase II/III file formats	\$19.95

All items are warranted for 90 days. 30 day money back guarantee if not completely satisfied and diskette package is not opened. MasterCard and VISA are welcome. Please add \$2.50 for shipping. California residents please add 6% sales tax. Prices, availability and specifications subject to change without notice.

Minimum hardware required for MS-DOS: 128K memory, two 360K floppy disk drives (hard disk recommended for Sales and Purchase Order Processing), 132 column printer, MS-DOS (or PC-DOS) version 2.0.

Minimum Hardware Required for CP/M-80 computers: 80 x 24 character display terminal, 64K memory, two 360K disk drives (hard disk recommended for Sales and Purchase Order Processing), 132 column printer.

The Gemini Emulator Board: A Review

William M. Adney
P.O. Box 531655
Grand Prairie, TX 75053

Interrupt 10 — standby, execute. Interrupt 16 — standby, execute. Those are the “sounds” of the long awaited D.E.L. Gemini Emulator Board running H/Z-150 programs on the H/Z-100 computer. As Bob Ellerton would say, the IBM Personal Computer is FINALLY compatible with the entire family of Heath and Zenith computers.

This article begins the first of three on PC emulation on the H/Z-100 computers. It deals with the Gemini installation and PC compatibility issues that have bothered some H-100 owners. The second article in this group will review UCI's Easy PC Emulator in the same way. In both articles, I intend to provide a basic review of each board, and tell you what it will and will not do. The third article will be my comparison of both boards in terms of compatibility and performance. In addition, I will include a review of HUG's excellent ZPC emulator by Pat Swayne. After you have read all three articles, you should have a fairly good idea of what will be the best emulator for you.

What Is Emulation?

Webster's New Collegiate Dictionary says that an EMULATOR is a “hardware device or a combination of hardware and software that permits programs written for one computer to be run on another”. Similarly, EMULATE is defined as “to strive to equal or excel”.

Emulators have been used in the mainframe computers for a long time, so I have more than a passing familiarity with them. And I have found that they usually bring some good news and some bad news. Most emulators are able to provide a satisfactory level of emulation for the system. But there are some hazards associated with emulation. The biggest hazard is that it is nearly impossible to achieve the same performance with an emulator that the original system provides. Performance degradation (or slower system response) is the usual price you pay for emulation.

But enough of the introduction . . . let's take a look at the Gemini.

Buying The Gemini

When you plunk down your \$700, you will walk away with two boxes. Ah yes, I can hear it now . . . some sharp individual will point out that the Gemini is only \$599. True, but you must also buy an operating system, since the Gemini will NOT run PC compatible programs with the standard Z-100 MS-DOS. You must have the Z-150 MS-DOS or IBM PC-DOS to run PC programs. As I write this, I note that the Heathkit Christmas 1985 catalog (200R) has a special deal on the Z-150 MS-DOS (version 3.1) when you purchase it with a Gemini or Easy PC emulator — \$90.00. Even though you can find PC-DOS for less money, the Zenith MS-DOS is much better for several reasons that I will talk about later.

Unpacking the Gemini will reveal a single board with some instructions and other information. One specific item that you should send in immediately is the registration form for your board. Additional information includes specific information about the keyboard and other functions which is also displayed on the Gemini help screens.

The Testing Configuration

In order to establish the parameters that I used for testing the Gemini Emulator, it seems appropriate to tell you exactly how my system is configured. My H-100 has the old motherboard. It has been modified as specified in the Heath Winchester Upgrade manual and supports a 26 megabyte Tulin hard disk. The motherboard is fully populated with 64K RAM chips for a total of 192K. Video memory is a single bank of 64K memory (monochrome only). In addition, I have a Piiceon 256K memory board for a total of 448K of system memory. One half height drive is also located in my H-100.

I also have another separate 5-1/4" drive in a separate cabinet with its own power supply. Printer support is provided by an H-25 dot matrix printer, plus a DTC Style Writer (similar to the Brother HR-15) for letter quality.

As a matter of information, I will use this same configuration for the testing of the UCI Easy PC even though I have plans to upgrade my H-100 to support the 256K RAM and 8 mhz.

The Gemini board tested runs at 5 megahertz only and was one of the first boards available. ROM version 1.0 on the Gemini was used to test all software as shown in Listing 4. During the testing process, Heath Company provided me with ROM version 1.42, but due to writing deadlines, I was not able to fully test that version with all software. By the time you read this, the newer version of the Gemini Emulator, which supports both 5 and 8 megahertz, should be available. It will also contain an updated ROM which provides support for both clock speeds. The Gemini was tested in the 5 mhz mode (actually it is 4.77 megahertz) using the CDR speed up kit at the slower speed.

I have used all available ports on my H-100. J1 is connected to my trusty H-25 printer. J2 is connected to my Prometheus Pro-Modem. And the parallel port is used for my DTC Style Writer printer.

Installing The Gemini

You will need a few basic tools to install the Gemini. I recommend a #2 phillips screwdriver, #3 phillips screwdriver, a 1/4" nutdriver preferably with a deep socket (low profile only), and an IC remover or a small flat blade screwdriver. I also found that a good light is extremely helpful, if not essential.

The first task is to remove enough of the Z-100 hardware so that you can get full access to the motherboard. D.E.L. has included excellent installation instructions for both the low profile and the All-in-One computer, so you will not have to look for your other manuals. The video board also must be removed in order to get to the motherboard. Remove the 8088 CPU IC and one of the cables that runs from the motherboard to the video board. Plug the 8088 into the indicated socket on the Gemini. If you have an 8087, there is also a socket for that on the Gemini. The underside of the Gemini contains a plug which mates with the 8088 socket and a socket which mates with the P106 plug on the motherboard. Now for the tricky part — align the plug and socket on the Gemini with the corresponding plug and socket on the motherboard and press down. It is difficult to see P106 which is why I suggest that you have a light available. One of the video cables runs through a slot in the Gemini, and the other plugs in directly to the Gemini. Reassemble your computer and you are ready to go.

I found the installation to be easy, and it took me about 35 minutes from start to finish on my low profile H-100. I took plenty of time to check things as I went, so that should be about the maximum time if you are somewhat familiar with the internals of your computer.

The six step instructions provided with the Gemini are clear, and I had no problem with the installation. Some people are reporting that they can add the Gemini to the H-100 in about 11 minutes, but I recommend that you take time to check that all plugs are carefully mated as you reassemble the system.

Now that the installation is complete, I guess it is time for the smoke test.

Power On!

My H-100 beeped (actually it was a keyclick) satisfactorily when the power was turned on, and the Gemini sign-on screen appeared. There are three options: Press I for the IBM mode, Z for the regular Z-100 mode, or the Help key for some information.

I quickly went through the help screens. The first shows how the Z-100 keyboard has been changed to reflect keys needed to run PC software. There was obviously some thought placed into that key configuration, since it is about as close as possible to the standard IBM keyboard layout without the disadvantages. I think that D.E.L. did an excellent job of defining the keys.

The keyboard has been slightly changed to reflect the IBM requirements as shown in Listing 1. In addition, you still must use the standard CTRL-RESET keys to reboot the system instead of IBM's CTRL-ALT-DELETE sequence. By the way, Listing 1 only shows the keys that were changed in function on the Z-100.

The second help screen provides some information on the use of the Gemini with a hard disk. More on that later.

The third help screen provides information about the serial ports. It is significant to note that the Z-100's J2 is now COM1 and J1 is COM2. More on that later.

Listing 1
Gemini Z-100 Keyboard Configuration

Z-100 Key	Gemini (IBM) Key
F0	ALT
F11	Hi-Res
F12	* and PrtSc
ICHR/DCHR	Scroll Lock

Period (.)	Del

The Serial Ports

One of the more interesting things about the Gemini Emulator is the way the serial ports for the IBM PC are implemented. What can be confusing is that the Z-100's serial J2 (DCE) port is COM1 and J1 is COM2. I specifically asked D.E.L. about that and was told that J2 is identical to the IBM's COM1, except for pin 22 which has Ring Detect. Most serial hardware connected to the IBM PC is intended to be connected to COM1. Since all IBM serial ports are set up in the DCE configuration, you may have to make up a special cable (or use a cable matcher) to get IBM compatible peripherals (like printers) to work on the Z-100's J1.

Since all of this can be very confusing, I have shown a wiring translation table as Listing 5, which should allow you to change

the J1 configuration to the IBM standard. This information was obtained from D.E.L. since it was not included in the Gemini that I received. Since I do not have any specific IBM compatible peripherals/cables, I did not test the configuration.

The Operating System

The addition of the Gemini basically gives you a new computer. As such, you must have an operating system that is Z-150 compatible, such as the Z-150 MS-DOS or IBM PC-DOS. I highly recommend that you buy the Z-150 MS-DOS since you can get the latest version 3.1 at a modest price. Although you can find PC-DOS for less money, all major releases of PC-DOS (e.g. 1.0, 2.0, and 3.0) have contained well documented and rather significant bugs. My experience with Heath/Zenith software is that it is uniformly high quality and has caused me no problems. In addition, D.E.L. has done most of their testing with the Z-150 MS-DOS which appears to be fully supported in the Gemini board.

Although PC-DOS, for the most part (excepting the hard disk commands) runs satisfactorily on the Gemini, there is at least one other good reason for using the Z-150 MS-DOS. Aside from the fact that the documentation is much better than a comparable version of PC-DOS, Heath and Zenith provide technical support for both the Gemini and MS-DOS. High quality software, good documentation, and hardware/software technical support justify some additional expense.

The use of the Z-150 MS-DOS can also make your life much easier because it includes the CONFIGUR command. CONFIGUR allows you to easily set up the various ports on your system. PC-DOS does not have a similar command, so it is a little more difficult to get things up and running properly.

In summary, I recommend that you buy the Z-150 MS-DOS with the Gemini. For those of you who do not have a chance to read a lot of magazines, there are a number of published patches to PC-DOS that correct a number of significant errors. Apparently, there is a DOS redirection bug in at least one of the latest versions of PC-DOS. My experience with all Heath and Zenith operating systems is that they tend to be relatively bug free. While no software is perfect, they appear to take greater care before the software is released. Although they may release updated versions later than other manufacturers, they do not have any catastrophic bugs that I have ever seen. In a well documented and published problem with PC-DOS version 2.0, certain error conditions encountered in BASIC could cause the system to completely trash the disk directory. I have never heard of or found a similar problem with the Heath/Zenith operating systems.

Running PC Software

In the Heath supplied information with the Gemini, they have provided a list of tested software as shown in Listing 3. I tested a variety of software as shown in Listing 4. Similar to Heath, I did not test every command and every function of the software, but I did take the test far enough to determine that the software would run on the Gemini. As with any hardware change, Heath recommends (and so do I) that you carefully check out the performance of the software before you entrust any valuable data to the system.

Aside from that caveat, the bottom line is that the Gemini does run PC software on the Z-100 as advertised. In most cases, I tested the software running PC-DOS. Due to time restrictions, I was not able to test all programs under the Z-150 MS-DOS, but I would expect that slightly better performance might be achieved.

The only problem that I encountered is that Gemini seemed to have a problem with Sidekick running under PC-DOS. Although Sidekick seemed to run normally, I could not open more than one function (except for the help screen). I do not consider that a significant problem, but I did report it to D.E.L. My suspicion is that it is a problem with PC-DOS, and D.E.L. told me that Sidekick was tested under Z-150 MS-DOS. It works fine under those conditions.

Listing 2

Serial Port Information For Gemini Emulator

Z-100 J2 (DCE port) is basically the same as the IBM serial port (COM1) except that the Ring Detect (pin 22) is not implemented due to hardware in the Z-100. Microsoft Mouse (serial version) can be plugged in directly to J2, and D.E.L. tells me that it will function correctly with appropriate software.

Z-100 J1 (DTE port) can also be used for serial interface with IBM compatible peripherals as COM2 when the cable is set up as shown below. This information was obtained from D.E.L., but was not tested as part of this review.

Pin Conversion For Z-100 Serial Port J1

Z-100 J1 (DTE Port)	IBM PC Serial Port 2 (COM2 - DCE Port)
1	1
2	3
3	2
4	5
5	4
6	20
7	7
8	8
11	11
20	6

Note: Two jumpers (J109 and J111) on the Z-100 motherboard must be in their normal positions as specified in the Z-100 manual. These jumpers are factory set in their correct positions and should not be modified.

A Look At Performance

In order to provide a qualitative measure of performance, we tested Flight Simulator on a Z-150 and a Z-100 at the Dallas store. Flight Simulator was set up in the demonstration mode for an RGB color monitor, and we hit the space key at the same time to begin the demo. When the Z-150 clock indicated 12 seconds into the flight, the Z-100 clock was at 6 seconds. Admittedly, Flight Simulator is a complex test because of all the graphics and video processing, but it does demonstrate that the Gemini's video display is somewhat slower than a PC. You can expect that video intensive PC programs will run slightly slower on the Z-100, but you should be aware that this test was done with 5 megahertz system. I expect that the addition of the 8 megahertz clock to the Z-100 would provide a corresponding performance improvement of about 30 percent.

The use of a hard disk also improves performance as expected. While I did not do any similar performance testing with a Z-150 hard disk, the Z-100 performs quite well with my hard disk. If you expect to use a large number of PC programs, you will probably want to run the system at 8 megahertz with a hard disk. Perfor-

mance on my system, even with a 5 megahertz clock, is quite easy to live with if the programs are on the hard disk.

Gemini And The Hard Disk

Instructions are included for using the Gemini with a hard disk. The basic process is to use the Z-100's PART utility to identify a "Gemini" partition. At the time of this writing, you also must use the Z-150 PREP utility for the Gemini partition. For those of you who have hard disks, this may sound like you might destroy all of the other data on the hard disk. Not true. PREP only accesses the identified Gemini partition and does not PREP the entire hard disk. However, I recommend that you completely back up your hard disk just on general principles. That is always a good practice whenever you make a major hardware change in your system. Be sure to take periodic backups on the hard disk, too.

As mentioned previously, I have a 26 MB Tulin hard disk. I defined a 3.3 MB Gemini partition with PART. I then ran the Z-150 PREP utility which took 65 minutes for a 6 pass check. The Z-150 FORMAT program (with the /S option) tells me that I have a total of 3,362,816 bytes on the hard disk with no bad sectors.

After the hard disk was formatted, it was a simple matter to copy programs from a floppy using the standard MS-DOS COPY command. Since I have very few PC programs, I only tested those programs on the hard disk which belong to me personally, so that I would not violate any of the copyright restrictions. In addition, the Dallas and Fort Worth Heathkit stores allowed me to test some of their "inventory" of Z-150/PC programs in the store on a Gemini equipped Z-100.

As previously mentioned, those of you who expect to use the Gemini with a hard disk must use the Z-150 MS-DOS PREP utility on the hard disk. In fact, all hard disks shipped for the IBM PC/XT/AT have already been prepared at the factory or the dealer with a utility similar to PREP. That utility is not available to users in all current versions of PC-DOS. Information contained in the hard disk's Superblock is factory installed for the IBM computers.

The unique Superblock format for the IBM PC's is probably the reason that the PC-DOS FDISK command does not work with the Gemini on the Z-100. Since the PREP utility provides the capability to use just about any hard disk with the Z-100 or the Z-150, that is a significant advantage in my opinion.

The bottom line is that, if you want to use a hard disk with the Gemini, you must use the Z-150 MS-DOS PREP utility. Although I found that D.E.L. is aware of and working on the problem, I suggest that it is a waste of time to pursue it. I would rather see enhancements and improvements to the Gemini.

Does The Gemini Work As Expected?

Basically, the answer is yes. I have tested the DTC printer on the parallel port with the Z-150 WordStar. My ProModem works fine with Hilgraeve's HyperAccess telecommunications program on serial port J2 (COM1). I was not able to get the H-25 printer to work on serial port J1, which I finally determined was the result of a different cable configuration required by the ANGEL Print Buffer (See May 1984 REMark for a review of the ANGEL). One of the technical support experts at D.E.L. tells me that the H-25 works just fine with a standard cable connected to J1, but I did not have the time to set up a new cable for testing.

My H-100 contains an old motherboard which does not support the 256K RAM chips. There are some initial reports that the Gemini does not work with old motherboards which have been

modified in accordance with Pat Swayne's article in the July 1985 issue of REMark. While that is probably due to some kind of a timing problem related to the modification, the Gemini is only certified to work with unmodified motherboards, either old or new. If you have an old motherboard (part number 85-2653-x), I would recommend that you not plan to do the 256K/8 mhz modification until more information is available. If the part number is different from the one above, you have a new motherboard, and the Gemini should work with no problems. As you might expect, however, the Gemini is only certified to work properly with the HA-108 upgrade kit since a significant number of ICs are changed during the upgrade process to support the 8 mhz processing.

Listing 3

Heath/Zenith Tested PC Software On Gemini

MS-DOS for Z-150; Versions 1.25, 2.11, and 3.1
CCPM-86
GW-BASIC for Z-150; Versions 1.10 and 2.02
Microsoft FORTRAN
Microsoft PASCAL
C-86 Compiler
WordStar Professional
Multimate
dBase II and dBase III
Condor
RBase 4000, 5000
Microstat
Lotus 1-2-3
Symphony 1.0
SuperCalc 3
Microsoft Chart
GraphTalk
Digital Research GEM
4-point
MASM Macro Assembler
Microsoft Flight Simulator
Robotron
Donkey Kong
Microsoft Mouse

Note: Heath has not tested every command or configuration for each of the above programs.

The only real limitation of the Gemini is that it does not support the sound capability of the PC in the basic kit. I have just received a Gemini Sound Board from D.E.L. which adds the sound capability. It includes a small board, about 2" by 3", which plugs into the Gemini, and a small speaker. Due to writing deadlines, I have not had a chance to test the Gemini Sound Board, however, I will include that in the third article on emulators. With the addition of the sound board, the Gemini system will provide all essential elements of the IBM PC emulation. According to D.E.L., the Gemini Sound Board will sell for under \$50, and you can check with them at the phone number listed at the end of this article for additional information.

In order for you to get a full picture of the Gemini, I have also listed Heath Company comments which are included with the Gemini board. Listing 5 is the summary of what the Gemini will do. Listing 6 is a summary of what the Gemini will not do.

Get a FREE copy of *The Buss Directory* just for trying *Buss*!

We want to send you a FREE copy of *The Buss Directory* as your bonus for trying *Buss: The Independent Newsletter of Heath Co. Computers*. Even if you decide not to take *Buss*, the Directory is yours to keep!

Here's how this special introductory offer works:

- We'll send you two issues of *Buss* to examine. If you find *Buss* doesn't meet your needs, just write "cancel" across the invoice you'll get. You'll have paid nothing, and *The Buss Directory* and the two issues of *Buss* you've received are yours to keep.
- If you do subscribe and ever become dissatisfied with *Buss*, simply cancel. You'll get a prompt, 100% refund of every cent you paid—no questions asked. *The Buss Directory* and all the issues of *Buss* you'll have received are yours to keep.

You can't lose with this special offer, so send in your order today to start receiving *Buss*! See what the information in *Buss* can do for you and your Heath/Zenith system.

Twenty times a year, you'll get a complete report on the latest news about your Heath/Zenith system—delivered directly to you by first class mail. *Buss* helps you:

- Learn what new products are being developed, and where you can get them.
- Benefit from the advice of users when you write in to *Buss*'s "Requests for Assistance" column.
- Save money when you add to your system! *Buss* offers a free "For Sale" listing for Heath/Zenith users where you can pick up a bargain.
- Avoid bugs in your system as you read how other users have solved similar problems with their computers.
- Discover news and events in the Heath/Zenith community that affect you.
- Meet other users in your area through the "Local Club Notes" section of *Buss*.
- Get unbiased coverage of your system from the oldest independent newsletter for Heath/Zenith users. Since 1977, *Buss* has been committed to supplying information exclusively for Heath/Zenith users.

And in addition to the support you'll find in *Buss*, you'll receive FREE the latest edition of *The Buss Directory* (normally \$12.50), a reference tool with information on over 400 independent sources of support for your Heath/Zenith system. It includes hardware, software, peripheral products, and supplies you can use to complete your computer system.

We'll mail you the Directory as soon as we receive your order.

Call Toll Free: 800/341-1522

(DATATEL 800™, for orders only, Monday-Friday 8 a.m.–9 p.m., and Saturday 9 a.m.–5 p.m., Eastern Time)

Or use this coupon, and mail your order to:
Buss, Dept. R86
716 E Street, S.E.
Washington, D.C. 20003
202/544-0900

Remember, your satisfaction with *Buss* is completely guaranteed. If at any time you are not satisfied, any money you've paid will be refunded in full.

Yes! Rush me my FREE copy of *The Buss Directory* as my bonus for trying *Buss* newsletter.

Bill me \$28 for 20 issues (one year) of *Buss* (\$40 overseas).

Payment enclosed (checks must be in U.S. dollars payable on a U.S. bank).

Other limitations on the Gemini are basically those imposed by the IBM PC. The most significant is perhaps the lack of support for 8 inch disk drives. Although not all IBM PC video modes are supported by the Gemini, it does support color, but does not support intensity differences. That is the specific reason why the Gemini only supports half the colors available on the IBM PC. The IBM PC really supports eight basic colors. Eight colors are displayed in high intensity, and the same eight colors can be displayed at low intensity. During the testing process at the Heathkit stores, I did not see any noticeable difference between the color displays on the Z-150 and a Gemini equipped Z-100.

My Opinion Of The Gemini

All in all, I think the Gemini is a rather spectacular technological achievement. The capability to provide PC emulation on the Z-100, with some very modest limitations, is available with the Gemini. It performs as advertised, although there is no question that it "downgrades" the Z-100 to perform like an IBM PC. That is not a bad reflection on D.E.L. or the Gemini board since the IBM PC simply does not have some of the advanced features available on the Z-100.

Since I received the Gemini Sound Board too late to be included in this article, I have not tested any of the software with it. My current indication is that it is expected to sell for under \$50, but you should check with D.E.L. for the exact price.

Since the Gemini obviously involves a hardware change to the Z-100, I also tested the various other H/Z operating systems and associated software to verify that there was no effect on the normal performance of the computer. I could not find any performance differences, and all software worked normally under all operating systems.

Special Software Testing On The Gemini

Hilgraeve, Inc., and Redwood Development provided very quick response to my request for some software to run on the Gemini. Since both programs worked satisfactorily with the Gemini, they will also be used to check out UCI's Easy PC. More surprising is the results of that testing with some very sophisticated programs.

HyperAccess (Hilgraeve, Inc.)

In the September issue of REMark, I noted that Hilgraeve's ACCESS telecommunications program was highly recommended for all users ranging from novice to expert. Since telecommunications programs can be tricky to interface on a normal machine, I thought that a good compatibility test of the Gemini would be to try the latest Z-150/IBM PC version of HyperAccess on the Z-100. With a slight configuration change that is easily made on the IBM PC version, I was able to use HyperAccess with absolutely no problem. HyperAccess provides the unique capability to modify the configuration with absolutely no changes to the program code which is the particular feature that allows the PC version to run on the Z-100. Hilgraeve's foresight in developing HyperAccess is commendable.

Although I thought ACCESS was excellent, HyperAccess is absolute dynamite! If you need a telecommunications program, HyperAccess is probably the ultimate for any application that I can imagine. And I can imagine quite a few unusual applications! As if that weren't enough, Hilgraeve has thoughtfully provided an outstanding tutorial disk which displays just about all of the HyperAccess features in about two hours. That will be of particular interest to telecommunications novices and busy execu-

tives who do not have a lot of time to spend in learning new software. The basic features of HyperAccess will probably provide all that is required by most people. The advanced features should satisfy even the most discriminating expert.

If you have already purchased ACCESS and would like to upgrade to HyperAccess, Hilgraeve has a reasonable update policy. Matt Gray, President of Hilgraeve, Inc., tells me that registered ACCESS owners can obtain HyperAccess by sending in the difference between the purchase price of ACCESS and HyperAccess. Registered owners do not have to return the original ACCESS distribution disk. The upgrade policy only applies to registered owners, and you must obtain the upgrade directly through Hilgraeve regardless of where you originally purchased ACCESS. Be aware that Hilgraeve's ACCESS program is altogether different from Microsoft's copy protected Access telecommunications program. I will not comment on the similarity of the names.

If you need a telecommunications program, HyperAccess has everything you will need whether you are a novice or an expert. If you order the Z-100 MS-DOS version, you will also receive a modem adapter for the serial port plus a special version which runs on the Gemini in addition to the normal Z-100 MS-DOS version. The bottom line is HyperAccess is highly recommended.

Listing 4

List Of Z-150/IBM PC Tested Software For This Review

MS-DOS 2.11, 3.1 for Z-150
IBM PC-DOS; versions 1.10, 2.10, 3.0
Microsoft Flight Simulator
Microsoft Word version 2
Microsoft Project

Framework
AutoCad
Micro/SPF
COPY II PC
HyperACCESS
WINCAD
jr-CAD
Sidekick *

* Tested under PC-DOS 2.10. See text for more information.

WINCAD And jr-CAD (Redwood Development)

Although I will review WINCAD for the Z-100 in more detail later this year, I thought that another good compatibility test for the Gemini would be to test the graphics capability typically provided by a Computer Aided Design (CAD) program. Redwood Development provided me with standard PC versions of WINCAD and jr-CAD which both ran satisfactorily on my Z-100 with the Gemini.

My initial impressions of both programs are very favorable. Both are easy to use, and I ran the demo programs which worked fine.

Although I have not used a CAD program on a microcomputer before, it only took about 10 minutes to become familiar enough with the command structure to use the programs. WINCAD is the advanced version of the program which obviously has more features. I became so engrossed in the capability to draw pictures that I had to force myself to stop.

Some Input From D.E.L.

Almost everyone interested in the subject of PC emulation on the Z-100 has probably wondered why the Gemini was announced about a year ago, but was not available until recently. I specifically asked Ed Dolejsi, President of D.E.L., about that. Here is the answer to that question.

When the Gemini was in development, D.E.L. was told that the Microsoft Flight Simulator was the ultimate and final test for a computer in terms of IBM PC compatibility. The announcement of the Gemini was based on the fact that D.E.L. was able to successfully run Flight Simulator on a Gemini equipped Z-100. Unfortunately, Flight Simulator is not really the ultimate compatibility test even though it really exercises the video and hardware interrupt capability of the PC hardware configuration. Since the objective of the Gemini was to provide a nearly total PC emulation, that also required the capability to run virtually all of the copy protected software available for the PC.

Copy protected software, which normally can cause all kinds of user problems, also was responsible for the delay in the final production of the Gemini. Strange forms of copy protection ranging from specially programmed access to normally unused floppy disk tracks to weirdly formatted tracks in the middle of a disk or file caused some significant development problems. One form of copy protection also includes a physical alteration of the disk which involves using a laser to "punch" a tiny hole in the floppy. Copy protection involving the so-called worm code is another consideration. In any event, Ed tells me that the implementation of the required hardware/software to cope with the various copy protection schemes conspired to introduce associated delays in the final production of the Gemini.

The Latest (And Worst) In Copy Protection

Those of you who have read this column before know of my particular aversion to copy protected software. As a matter of fact, you will not see a review of any copy protected software in my column because I do not believe that it serves the best interests of the user community. I have to admit that I am more than a little puzzled at the popularity of Lotus 1-2-3 because of the copy protection that it has. That appears to be primarily the result of a corporate fad which incidentally popularized the use of the 16-bit computer. I should also note in passing that Lotus has reportedly won at least one lawsuit in the million dollar range because of illegal copying of software by a rather large company. That proves at least one of my points in that copy protection does not really protect the software manufacturer.

I have already done some research on the techniques of copy protection with the intention of doing some detailed writing about it. Some recent news has prompted me to make another comment about the copy protection situation, however.

One of the most insidious forms of copy protection is known as WORMS. Software which contains worm code supposedly detects the fact that an illegal copy of the software has been made. When an illegal copy is "found", the worm code proceeds to systematically destroy the data on the disk. How that happens is not important . . . the fact is that it does happen.

The best publicized case right now happened to Sheldon Richman who is a columnist for the Washington Times. He was apparently using his personal and legal version of Microsoft Access (not to be confused with Hilgraeve's ACCESS) when the worm got loose and trashed the disk. Reports also indicate that this was preceded by a nasty message. This basic story is related in John C. Dvorak's column in the November 11, 1985 issue of InfoWorld. Microsoft apparently claims that this message was an idle threat that was not condoned by the company (also reported by Dvorak). I will continue to recommend caution on buying and using copy protected software because of this kind of problem.

Listing 5

Heath Notes On What The Gemini Will Do

The Gemini Emulator will:

- Run many IBM PC software programs.
- Run IBM PC programs that use ROM BIOS for I/O (input/output) functions, although some programs will require less than maximum baud rate settings for serial devices. Specifically, hardware handshaking is not supported in the current release, although software handshaking (XON-XOFF) is supported. (**Note:** I found that this specifically refers to ROM version 1.0 on the Gemini.)
- Allow full Z-100 operation.
- Run in Z-100s with the 5 MHz system clock. (**Note:** D.E.L. tells me that, as I write this in October, new boards which run at 5 and 8 mhz will be shipped in several weeks. See the text for more information.)
- Support both Z-100 and IBM PC Winchester drive operations.
- Access the 8087 Numeric Co-Processor in both the Z-100 and IBM PC modes.
- Allow you to use the less expensive 8087 Numeric Co-Processor (model Z-316) upgrade.)
- Support eight colors.
- Give you the capability to run future releases of current PC software.

Credits And Thanks To . . .

Special thanks to Heath Company, and particularly Bob Ellerton, for providing a Gemini board for this review. I also found that the people at D.E.L. were particularly helpful in providing the technical information.

The Dallas and the Fort Worth Heathkit Stores both allowed me to use one of their machines to test various software on the Gemini. Since I do not own a lot of PC software, they also provided store software which was tested in each store in order to preserve the copyright and license restrictions. Special thanks to the store managers, Don Murray (Dallas) and Dave Koslowsky (Fort Worth) for providing that support. In addition, the Dallas store also provided technical assistance by allowing Chris (the store technician) to modify a store Z-100 so that we could test the Gemini under various hardware configurations.

Hilgraeve, Inc. provided me with an evaluation copy of Hyper-Access on very short notice, so that I could test the telecommunications compatibility of the Gemini. Special thanks to Matt Gray, President of Hilgraeve, for that support.

Redwood Development also furnished evaluation copies of WINCAD and jr-CAD on very short notice for Gemini Testing. Special thanks to Phil Winninghoff, President of Redwood Development, for his assistance.

Listing 6 Heath Notes On What The Gemini Will Not Do

The Gemini Emulator will not:

- Support IBM PC hardware add-on products.
- Run software that requires the addition of special hardware (network I/O cards and analog joysticks, for example) unless custom drivers are supplied by Gemini Technology, Inc.
- Support more than 640 Kbytes of RAM (random access memory) in the IBM PC mode.
- Support 16 colors.
- Support data input through its parallel port in the IBM PC mode.
- Allow you to use the Z-100's type-ahead buffer.
- Allow you to use the CAPS LOCK key. It may generate non-printable characters. (Note: I did not have any problem with this. The Z-100 CAPS LOCK performs as a toggle just like the IBM PC.)
- Allow you to use CTRL/ALT/DEL keys to reset your system. You must use CTRL/RESET.
- Support sound or keyboard "beeps".
- Co-exist on the Z-100 main board with ZCLK (model PC-240).
- Recognize and clear characters scrolled up from the 25th line display.
- Boot-up if you have only 32K of video RAM (you must have 64K). **Note:** To determine the amount of video RAM you have, type S at the System Prompt. Your display will indicate how many bytes of contiguous RAM and Video memory you have installed in your system, and the type of video display you are using. If you have only 32 Kb of Video memory, you must install the Z-219-1 option and configure the video board for 64 Kb.
- Support MFM-150 ROM tests.

Notes:

1. Operation in the IBM PC mode requires the OS-63-50 MS-DOS Operating System (or equivalent) which must be purchased separately. Please note that there are syntax differences between many Z-150 MS-DOS commands and their Z-100 counterparts. Refer to their respective manuals for specific information on these commands.
2. J1 is equivalent to COM2; J2 is equivalent to COM1.

Next Month And In The Future

Based on the latest information, it appears that I will not receive UCI's Easy PC in time to review it in the February issue. Regardless the actual shipment, I will also be continuing the general information series with various topics of general interest. My thanks to all of you who have written to me on how that information has helped you. I have even received some letters from advanced users who learned something about operating systems and system setup. I have received more letters about these subjects than from all previous columns combined. Interestingly

enough, few of the letters requested technical information or clarification. Most were simply notes containing complements and requesting that I continue that series.

If you have any particular subject of general interest that you would like to see in these pages, please let me know. Databases, FAT's, files, directories, directory trees, I/O redirection, and command pathing are a few of the topics planned for future articles.

Questions relating to the Gemini as discussed in this article will usually require a personal answer, so I will request that you include (as usual) a self addressed stamped envelope for a personal reply. If you have any general questions about the Gemini, your best bet is probably to start with your local Heath/Zenith Computer Center. It is obvious that things will change due to the lead time required to publish this information in REMark.

768K Z-100™ WITH OUR ZMF100™ PACKAGE

**\$65
EACH**

Our ZMF100™ modification package lets you plug 256K RAM chips into your "old" motherboard Z-100™ computer. Up to 768K (27 RAM's) on the part number 85-2653-1 motherboard.

Simple, mostly plug-in installation requires no trace cutting or funny assembly tricks. Fully reversible. No permanent changes to the motherboard.

Requires disassembly of the computer and some easy soldering to connect the pin-1's of the memory sockets together. All materials (except memory chips and solder) are supplied along with complete, detailed instructions.

Price: \$65 each.

Quantity Discounts. UPS Shipping Free.
Order Direct or See Your Local Heath/Zenith Dealer.
Literature Available. VISA or Mastercard Accepted.

Important Notice To ZPC Users

Pat Swayne
HUG Software Engineer

The first 80 or so copies of the new ZPC support disk (885-3034-37) that were made (including those distributed at the West Coast HUG Conference) contain an error in the file FIXZPC5.DAT. This file contains the line

F184E,1951,90

which should be changed to

F184E,1851,90

If the file ZPC3.COM on your ZPC distribution disk is dated 10-4-85, you should use an editor to correct the file FIXZPC5.DAT before you run PREFIX on the support disk.

If you are reading a borrowed copy of REMark...

maybe now is the time to join the National Heath/Zenith Users' Group. You will receive:

- a copy of **REMark** filled with new and exciting articles and programs each month
- access to the HUG library filled with a large variety of programs
- discounts on a variety of Heath/Zenith computer products (see **REMark** January, 1984 issue for more details)

And remember, your local HUG is an excellent source of information, support and comradery. A membership package from the National Heath-/Zenith Users' Group contains a list of current local HUG clubs as well as other interesting information.

PUT A CP/M COMPUTER IN YOUR ZENITH PC **NEW!**

Now your Zenith PC, or MS-DOS compatible can run 1,000's of CP/M80 programs at microprocessor speed. Jump into the exciting world of CP/M software previously unavailable to PC users, or move your existing CP/M library up to 16 bit hardware and peripherals without rewriting a single program.

How does it work?

RUN/CPM is a revolutionary new product that combines software and hardware to provide your PC with the dual-processing capability necessary to execute either 8080 or 8088 code, thus allowing you to run both CP/M80 and MS-DOS programs.

Simple to install-easy to use

The only installation required is a simple replacement of your PC's 8088/86 microprocessor with our 8/16 V-20/30 microprocessor developed by NEC. A simple one-time procedure using our Disk-to-Disk transfer utility will convert your CP/M80 software to the required format necessary for execution on MS-DOS personal computers.

Features Plus!

Now the excitement begins as your CP/M80

programs come to life on your PC with features that allow you to assign multiple subdirectories, select colors or intensities, redefine function keys, and even issue MS-DOS commands while in the CP/M mode.

Terminal Support

No product supports more terminals with full emulation than RUN/CPM. Virtually all major terminals are supported including Kaypro, Zenith, Osborne, Televideo and Radio Shack just to name a few.

Add all of this up and you have the best CP/M80 to MS-DOS interface available on the market today. Running CP/M80 programs on IBM PC's and compatibles has never been easier or more affordable!

RUN/CPM-A \$99.95 (Includes: Interface Software, complete documentation, disk transfer utility, and RS-232 communications program.)

RUN/CPM-B (same as RUN/CPM-A but also includes the NEC V-20 Microprocessor.)

Continued from Page 51

patches are self-installing, and a special batch file called PREFIX.BAT selects the proper patches for your release of ZPC. The patches are only for level 3 of ZPC, but the assembly language code for the patches is provided in the file FIXASM.DOC so that you can fix your source code and assemble updated lower levels.

The second section of the ZPC Support Disk contains an emulator for the ANSI.SYS device driver that is supplied with MS-DOS for the Z-100 PC series computers. Some PC programs require ANSI.SYS, but it will not work on a Z-100, and the ANSICON.DVD driver supplied with Z-100 MS-DOS will not work while ZPC is in the PC mode. The file ANSISYS.COM on this disk, when loaded after ZPC, provides an exact emulation of the ANSI.SYS driver, so that programs requiring it will run properly. Once ANSISYS.COM has been loaded, ANSI emulation can be turned on or off using a companion program, ANSI.COM. You just give the command ANSI ON to turn emulation on, and ANSI OFF to turn it off.

The third section of the ZPC Support Disk contains patches that enable the following programs to run under ZPC: LOTUS 1-2-3 (PC version, release 1A), DBASE III (version 1.1), FRAMEWORK (version 1.1), ENABLE (version 1.1), MULTIMATE (Z-150 version 3.3), VOLKSWRITER DELUXE (version 2.0), EDIX (version 2.05), and PC PALETTE (version 1.0). Also included is a corrected patch for the Heath/Zenith release of SuperCalc3, a patch for the IBM PC release of SuperCalc3 (release 2.0), and alternate patches for Microsoft Word.

If you have a Z-100,
treat yourself to some

PERKS™

Perks is the background desktop utility program for Z-100's featuring full-color windows, a calculator, a notepad, an ASCII table, a Filer, a screen saver, alarm timers, context sensitive help screens and a calendar with an appointment schedule. Perks works with all Z-100's having 192K or more of memory and using the Z-DOS/MS-DOS 1.X or 2.X operating systems.

Shown above is an actual screen photo of Perks in operation. The Notepad window contains data "imported" from the Lotus 1-2-3 worksheet being prepared when Perks was activated.

Here are some actual unsolicited comments from customers:

"My heartiest congratulations and thanks for a fine product. I expect that Perks will be the best software dollar I have yet spent, and I have spent lots. Anyone with a Z-100 should run to buy Perks"

"I know I said this over the phone, however, once again I would like to thank you for a GREAT product!"

"You're the best friend a Z-100 ever had! Mine loves Perks, and I want to thank you for the prompt filling of my order. Perks is everything and more than I thought it was going to be. The Notepad function alone is worth the price. And to think, I'd thought about buying a Programmer's Calculator from Hewlett Packard! Yours does everything I'd have used HP's for. Your Program is simply beautiful and elegant!"

Perks is available at Heath/Zenith Computers & Electronics Centers, many independent Zenith Data Systems dealers or directly from:

BARRY A. WATZMAN Microcomputer Systems & Consulting
